Monostable-multivibrator IC was changed.
 Former and new ICs differ in the pulse width.
 Therefore, when IC is replaced, the resistor has to be changed to correct the pulse width.

Former IC			New IC		
P/N	Name	Pulse width	P/N	Name	Pulse width

DIGITAL 

MAINTENANCE MANUAL

2nd Edition (Revised 5)

Serial No. 10501 and Higher

WARNING

For the customers in the USA

This equipment generates, uses, and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of Part 15 of FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

Important—To insure that the complete system (including this peripheral) is capable of complying with the FCC requirements, it is recommended that the user make sure that the individual equipment of the complete system has a label with one of the following statements.

"This equipment has been tested with a Class A Computing Device and has been found to comply with Part 15 of FCC rules."

—or—

"This equipment complies with the requirements in Part 15 of FCC rules for a Class A Computing Device."

—or equivalent.

The shielded interface cable recommended in this manual must be used with this equipment in order to comply with the limits for a computing device pursuant to Subpart J of Part 15 of FCC Rules.

For the customers in Canada

This apparatus complies with the Class A limits for radio noise emissions set out in Radio Interference Regulations.

Pour les utilisateurs au Canada

Cet appareil est conforme aux normes Classe A pour bruits radioélectriques, spécifiés dans le Règlement sur le brouillage radioélectrique.

Changing the voltage selector may require the use of a different line cord or attachment plug, or both.

To reduce the risk of fire or electric shock, refer servicing to qualified service personnel.

SAFETY CHECK-OUT

After correcting the original service problem, perform the following safety checks before releasing the set to the customer:

Check the metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

LEAKAGE TEST

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 3.5 mA. Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 5.25V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 20 V AC range are suitable. (See Fig. A)

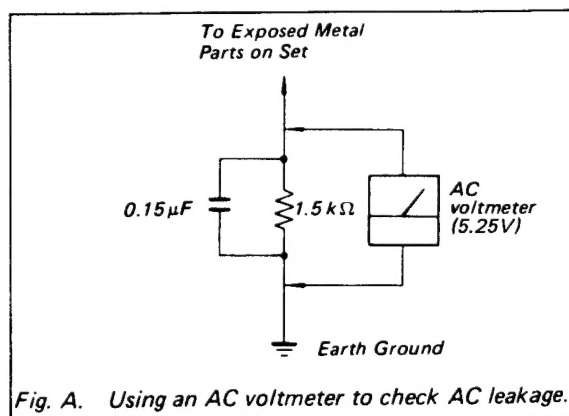

Fig. A. Using an AC voltmeter to check AC leakage.

TABLE OF CONTENTS

1. SERVICE INFORMATION

1-1.	General Precautions	1-1
1-1-1.	Removing and Connecting Boards and Connectors	1-1
1-1-2.	Head Cleaning	1-1
1-1-3.	Tapes for Inspection and Adjustment . . .	1-2
1-2.	External Case Removal	1-3
1-2-1.	Top Plate and Ornamental Panel	1-3
1-2-2.	Pad and Front Plate	1-3
1-2-3.	DR-54 Board (Motor Drive) Removal . . .	1-4
1-2-4.	Rear Plate (For IF-151 board) Removal	1-4
1-2-5.	Connector Panel Removal	1-4
1-2-6.	Monitor Rear Panel (For IF-153 board) Removal	1-4
1-2-7.	Board Stopper Plate Removal	1-5
1-3.	Power Supply Brock Removal	1-5
1-4.	Usage of Extension Board for Check and Adjustments	1-6
1-5.	Boards Location	1-6
1-5-1.	Inside of the Card Rack	1-6
1-5-2.	Top View	1-7
1-5-3.	Rear View	1-7
1-5-4.	Inside of Monitor Box	1-7
1-5-5.	Front View	1-7

2. PERIODIC INSPECTION AND MAINTENANCE

2-1.	Purpose of Periodic Inspections	2-1
2-2.	Daily Maintenance	2-1
2-2-1.	Cleaning	2-1
2-2-2.	Head Degaussing	2-2
2-3.	Methodology of Periodic Inspections and Maintenance Procedures	2-2

3. MECHANICAL ADJUSTMENTS AND REPLACEMENT

3-1.	Adjusting the Tape Shut off and Shuttle Mechanism	3-1
3-1-1.	Adjusting the Positing of the Photo-Interrupter	3-1
3-1-2.	Replacing the Shuttle Control and Adjusting its Position	3-1
3-2.	Tape Path System Check and Adjustment . . .	3-2
3-2-1.	Flow of Check and Adjustment Operations	3-2
3-2-2.	S Guide Roller Height Check and Adjustment	3-3
3-2-3.	T Guide Roller Height Check and Adjustment	3-3
3-2-4.	Timer Roller Height Check and Adjustment	3-4
3-2-5.	Reel Base Height Adjustment	3-4
3-2-6.	Tape Shifter Position Check and Adjustment	3-5
3-2-7.	Final Check of the Tape Path System . . .	3-5
3-3.	Tape Shifter Mechanism Replacement and Adjustment	3-6
3-3-1.	Checking Performance	3-6
3-3-2.	Plunger Solenoid Replacement and Adjustment	3-6
3-3-3.	Tape Shifter Replacement	3-7
3-3-4.	Tape Fast-Forward Check and Adjustment	3-7
3-4.	Timer Roller Replacement and Adjustment . .	3-7
3-4-1.	Timer Roller Assembly Replacement and Adjustment	3-7
3-4-2.	Replacing the Timer Roller Bearing . . .	3-8
3-5.	Tension Arm Replacement and Adjustment	3-9
3-5-1.	Tension Arm Assembly Replacement . . .	3-9
3-5-2.	Tension Arm Adjustment	3-9
3-5-3.	Tension Check and Adjustment	3-10
3-6.	Guide Roller Replacement and Adjustment	3-10
3-6-1.	Replacing the S Guide Roller Assembly . .	3-10
3-6-2.	Replacing the T Guide Roller	3-10
3-6-3.	Replacing the Guide Roller Bearing . . .	3-11

3-7.	Reel Motor Replacement and Adjustment . . .	3-12
3-7-1.	Reel Motor Replacement	3-12
3-7-2.	Brake Band Replacement	3-12
3-7-3.	Brake Plunger Replacement	3-14
3-8.	Brake Torque Adjustment	3-15
3-9.	Pinch Roller Mechanism Replacement and Adjustment	3-16
3-9-1.	Pinch Roller Pack Replacement	3-16
3-9-2.	Pinch Preplunger Replacement	3-16
3-9-3.	Pinch Plunger Replacement	3-17
3-9-4.	Assembling and Adjusting the Pinch Roller Mechanism	3-19
3-9-5.	Checking the Pinch Roller Pressure	3-20
3-10.	Capstan Motor Replacement and Adjustment	3-20
3-10-1.	Capstan Motor Replacement	3-20
3-10-2.	Checking and Adjusting the CTL-1 board Servo Gain and Phase	3-21
3-11.	Head Block Unit Replacement and Adjustment	3-23
3-11-1.	Overview of Head Replacement	3-23
3-11-2.	HBU Removal	3-25
3-11-3.	D/M REC Head Replacement	3-25
3-11-4.	D/PB Head Replacement	3-27
3-11-5.	A/E-RP Head Replacement	3-28
3-11-6.	D/S REC Replacement	3-29
3-11-7.	Scrape Filter Replacement	3-30
3-11-8.	Head Zenith Check and Adjustment	3-30
3-11-9.	Installing the Head Block Unit	3-32
3-11-10.	Checking and Adjusting the Heights of the Rollers	3-32
3-11-11.	Adjusting the Head Azimuth	3-32
3-11-12.	Head Clearance Adjustment	3-35
3-11-13.	Head Height Adjustment	3-38
3-11-14.	Head Contact Checking	3-39
3-12.	Fan Replacement	3-40

4. ELECTRICAL ADJUSTMENTS

4-1.	ARP-1 Board Adjustment	4-1
4-1-1.	Line Input/Output Adjustment	4-1
4-1-2.	1 kHz Test Signal Oscillation Level Adjustment	4-2
4-1-3.	AUX Input/Output Level Adjustment . .	4-2

SECTION 1

SERVICE INFORMATION

1-1. GENERAL PRECAUTIONS

1-1-1. Removing and Connecting Boards and Connectors

Always switch off the power for the PCM3402 before removing or installing any boards or connectors.

Installing or removing boards or connectors with the power on may destroy electrical components.

1-1-2. Head Cleaning

Always clean the D/REC head and the D/PB head before adjusting the electromagnetic conversion system (the REC-1 board, the DET-4 board, and the PA-57 board). If you make the adjustments with the heads dirty, you can adjust to incorrect values or may find it impossible to obtain good results.

Items needed for cleaning the heads

- . Cleaning sheet (leather):
Part No. 2-034-697-00
- . Ethyl alcohol

Cleaning method

When cleaning the head always use a cleaning piece which has been slightly damped by the ethyl alcohol and has been allowed to dry for several seconds. Clean the head gently by moving the cleaning piece horizontally.

NOTE: Do not move the cleaning piece vertically along the head. Doing so can damage the head.

1-1-3. Tapes for Inspection and Adjustment

The following tapes are necessary for inspecting and adjusting the PCM-3402:

(1) **Alignment Tape AR3402-1**

(Sony Part No. 8-960-080-51)

For adjusting the head azimuth, head height, head contact (digital only), AUX track level, digital track equalizer, error rate, Servo Gain, etc.

(See the table below.)

(2) **Standard Blank Tape for Recording CLC-DAQ**

(Sony Part No. 8-873-005-24)

For adjusting the REC-1, PA-57 and DET-4 boards

In addition to these reference tapes, a normal blank tape is necessary for the following adjustments.

(3) **Adjusting the tape path system**

(tension arm, guide rollers, tape shifter, tape tension, etc.)

(4) **Verifying the correction capacity, Punch IN/OUT, etc.**

Note: The tape used for (3) may have its edges and surface damaged during the adjustment, so it is best to keep a separate tape just for adjusting the tape-path system.

The tape used for (4) must be brand-new or in similar condition.

Contents of the PCM-3402 Alignment Tape
(The contents subject to change without notice.)

1-2. EXTERNAL CASE REMOVAL

1-2-1. Top Plate and Ornamental Panel

Remove the seven 4x8 button head screws, then pull the top plate up and away as is. (See the figure below.)

Remove the lug of the ground lead.

Remove the four 4x8 button head screws, then remove each cap on the timer roller, guide roller, pinch roller and T roller. Pull the four rollers up and away. (See the figure below.)

Remove the lug of the ground lead.

Holding the head cover, pull up to remove the ornamental panel.

Note: The ornamental panel can be removed even if the rollers are not removed, but we recommend to remove the ornamental panel after removing the rollers not to damage the rollers.

1-2-2. Pad and Front Plate

Remove the two +B4x25 screws and the two 4x8 screws. (See the figure below.) The pad and the front plate are a single unit, so this unit can be removed by pulling it forward.

Pad and front plate removal

1-2-3. DR-54 Board (Motor Drive) Removal

Remove the two +PSW3x6 screws and open the heat sink with DR-54 board.

DR-54 board removal

1-2-5. Connector Panel Removal

Remove the three +PSW3x6 screws, and open the connector panel.

Connector panel removal

1-2-4. Rear Plate (For IF-151 board) Removal

Remove the four +B3x4 screws to take off the rear plate.

Rear plate removal

1-2-6. Monitor Rear Panel

(For IF-153 board) Removal

- 1) Remove the top plate and then remove the lug of the ground lead that comes from the monitor rear panel.
- 2) Remove the four +PSW3x6 screws, and loosen the two +PSW4x8 screws fixing the monitor box.
- 3) Pull the bottom of the monitor rear panel and remove it.

Monitor rear plate removal

1-2-7. Board Stopper Plate Removal

- 1) Open the front door and remove the two +B3x4 screws securing the board stopper plate.
- 2) Tilt the board stopper plate forward and pull it in the direction of the arrow.

1-3. POWER SUPPLY BLOCK REMOVAL

- 1) Open the connector panel.
(See Section 1-2-5.)
- 2) Remove the connectors.
(CNJ921, 922, 923 and 924)
- 3) Remove the four +PSW4x8 screws.
- 4) Remove the power supply block.

1-4. USAGE OF EXTENSION BOARD FOR CHECK AND ADJUSTMENTS

- 1) Open the front door and remove the board stopper plate. (See Section 1-2-7.)
- 2) Press the PC board lever down and pull the board forward.

- 3) After removing the board, plug in the extension board.
- 4) Put the PC board on the extension board.

NOTE: When removing or installing the board, be sure to switch off the power.

1-5. BOARDS LOCATION

1-5-1. Inside of the Card Rack

- 1 ARP BOARD
- 2 DAD BOARD
- 3 DAC BOARD (OPTION) DABK-3400
- 4 DIO BOARD
- 5 AUX1 BOARD (Reserved)
- 6 AUX2 BOARD (Reserved)
- 7 MCK BOARD
- 8 CTL BOARD
- 9 EDT1 BOARD
- 10 EDT2 BOARD
- 11 MDC BOARD
- 12 MDM BOARD
- 13 SEP BOARD
- 14 REC BOARD

1-5-2. Top View

1-5-3. Rear View

SECTION 2

PERIODIC INSPECTION AND MAINTENANCE

2-1. PURPOSE OF PERIODIC INSPECTIONS

The purpose of the periodic inspections described in this section is to prevent malfunctions and breakdowns resulting from wear and material fatigue, which advance in proportion to frequency and accumulated time of use, in the PCM-3402's mechanical and drive systems.

In systems like the PCM-3402 that include digital processing systems, and especially those protected by error correction codes, minute defects in the system do not become readily apparent, and their detection is consequently often delayed (see the Figure below.) The periodic inspections recommended in this section are designed to eliminate this vulnerability in the PCM-3402 by aggressively discovering and repairing potential defects before they occur.

The basic purpose of performing these periodic inspections and maintenance procedures is to maintain the electrical and mechanical specifications listed in the PCM-3402's operation manual.

2-2. DAILY MAINTENANCE

Clean and degauss the PCM-3402 every day to maintain its performance.

2-2-1. Cleaning

Clean the areas indicated with arrows in the figure below with a cleaning piece slightly damped by ethyl alcohol.

- . If there is stubborn dirt on the tape guides in the guide roller and head block, clean with alcohol then wipe off with a clean dry cloth.
- . Wipe each of the heads in the direction that the tape travels in with a cotton swab dipped in alcohol, then wipe it lightly with a dry cotton swab.

Warning: The digital PB head is like the teeth of a comb, so be particularly careful with it. Never wipe it in the direction perpendicular to the direction that the tape travels in.

HEAD AND ROLLERS POSITION

- . Clean the tape shifter with a cotton swab dipped in alcohol.
- . After wiping the capstan and the pinch roller well with a cleaning piece damped by alcohol, wipe them with a soft, dry cloth.

Warning: When cleaning the rollers and guides, do not apply cleaning liquid directly to the roller or apply too much cleaning fluid to cloths or cotton swabs. Just let the cleaning fluid seep into the cleaning cloth or cotton swab.

Daily cleaning prevents the buildup of magnetic powder from the tapes.

2-2-2. Head Degaussing

Bring the degaussing surface of the degausser as close to the head as possible, then switch on the power of the degausser.

Slowly draw the degausser away from the head, then when it is a good distance away, switch off the power. Degauss all the heads and tape guides.

Warning: When degaussing, always switch off the power of the PCM-3402. Do not touch a head directly with the degausser.

2-3. METHODOLOGY OF PERIODIC INSPECTIONS AND MAINTENANCE PROCEDURES

In order to achieve the objectives stated in Section 2-1, the periodic inspections and maintenance procedures entail the following: replacing worn parts, cleaning components of the mechanical systems, lubricating, and conducting accompanying inspections and adjustments of the mechanical and electrical systems. These procedures are to be conducted at regular intervals according to the reading of the Timer (Hours meter) located on the DR-54 board of PCM-3402. The intervals for each inspection and maintenance procedure and part replacement are given in the table on the next page.

Note that the part-replacement intervals given in the table have been established on the basis of part life as estimated from actual performance. Sony therefore reserves the right to revise these intervals as it sees fit according to newly obtained part-life data.

PCM-3402 Periodic Inspection and Maintenance Schedule (Guidelines)

Conduct periodic inspections and maintenance procedures (including part replacement) according to the following schedule.

Inspection and maintenance work should be carried out first after 3,000H.

After the first 12,000H inspection and maintenance, repeat the schedule every 3,000 hours from the 3,000H inspection and maintenance program.

○ : Cleaning or lubrication ◇ : Check and adjustment ☆ : Part replacement H=hours

Inspection and maintenance item	Q'ty	3,000H	6,000H	9,000H	12,000H

SECTION 3

MECHANICAL ADJUSTMENTS AND REPLACEMENT

3-1. ADJUSTING THE TAPE SHUTOFF AND SHUTTLE MECHANISM

3-1-1. Adjusting the Position of the Photo-interrupter

Line up the dowel on the shifter assembly with the slot on the EOT holder and use a +PSW3x6 screw to install the sensor as far to the back as it will go. Since this sensor combines the light emitter diode and the photo-receiver in a single unit, there is no need to adjust the light shaft. Install the sensor pushed all the way to the back so that the sensor does not touch the tape.

3-1-2. Replacing the Shuttle Control and Adjusting Its Position

Measuring equipment: Voltmeter
Multimeter

Tools: 1.5mm hex wrench
4mm Phillips screwdriver

Replacement procedure

1. Remove the front plate and pad.
(See Section 1-2-2.)
2. Remove the top plate and the ornamental panel. (See Section 1-2-1.)

3. Remove the CPU-34 board.

Remove the CN429 connector on the KEY-7 board.

4. Insert the 1.5mm hexagonal wrench as shown below and loosen the fastening screw.

5. Loosen the two screws indicated in the figure below, pull the shuttle retainer forward, and remove it.

6. Remove the five +PS3x6 screws, and then remove the PSW plate.

7. Remove the connector that is connected to the VR-56 board.

8. Loosen the nut indicated in the figure below and remove the VR-56 board backward.

9. Install the new VR-56 board in the FSW plate assembly.
10. Use the multimeter to measure Resistance A indicated in the figure below, then adjust the variable resistor so that Resistance B shown in the figure below is half the value of Resistance A.

Specification: $B = \frac{A}{2} \pm 10\text{ohms}$

11. Install the shuttle retainer and the shuttle dial by reversing the procedure given in Step 5.
12. With the screw loosened in Step 4 tightened down, measure Resistance B and make sure that it is still the value measured in Step 9
13. If Resistance B has changed, loosen the fastening screw, turn the shuttle dial in the direction indicated by the table that follows to restore the correct value of Resistance B, then tighten the screw down again. Measure Resistance B again to make sure it has retained the correct value even after the screw is tightened down.

Multimeter resistance reading	Tool low	Tool high
Direction to turn the shuttle dial	Right	Left

14. Plug connector CN432 into the VR-56 board.
15. Plug connector CN429 into the KEY-7 board and install the CPU-34 board.

Shuttle midpoint voltage adjustment

Procedure:

1. Switch on the power.
2. Measure the voltage between Pin 2 in the figure below and the chassis ground.

Specification: $0 \pm 20\text{mV}$

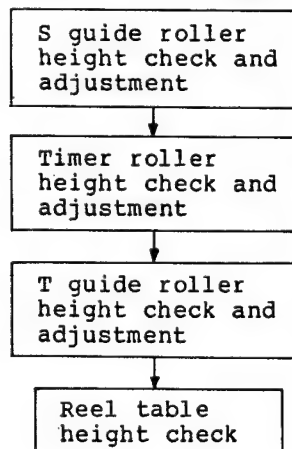

Adjustment: RV2 on the TPC-1 board

3-2. TAPE PATH SYSTEM CHECK AND ADJUSTMENT

3-2-1. Flow of Check and Adjustment Operations

When replacing or adjusting components of the tape path system (HBU, timer roller, tension arm, guide roller, etc.), check and adjust the tape path system according to the procedure given below. When carrying out one of the adjustments in the flow chart below, check all the subsequent items in the procedure and make only those adjustments you find to be necessary.

3-2-2. S Guide Roller Height Check and Adjustment

Tool: 1.5mm hexagonal wrench

S guide roller height check

1. Thread a blank tape and set the unit in the SLOW REWIND mode.
2. Check that the tape is wound up on the center of reel without rubbing the flange at all.

S guide roller height adjustment

Tool: Roller guide adjustment jig (J-6105-930-A)

1. Remove the cap of the S guide roller and install the roller height adjustment jig. In this case, do not tighten the jig any farther than it can be installed easily.
2. Loosen the two screws securing the roller guide.
3. Thread a blank tape and set the unit in the SLOW REWIND mode.
4. Turn the adjustment jig clockwise or counterclockwise so that the tape is wound up on the center of reel without rubbing the flange at all.

Jig turn direction	Guide roller
Clockwise	Down
Counterclockwise	Up

5. Tighten the screws for the guide roller, then check the height again.
6. Remove the adjustment jig and install the cap on the guide roller.

3-2-3. T Guide Roller Height Check and Adjustment

Tool: 1.5mm hexagonal wrench

T guide roller height check

1. Thread a blank tape and play it.
2. Check that the tape is passing through the center of the roller flange.
3. Make sure that the tape is not curling.
4. Make sure that there is clearance between the tape and the reel flanges and the tape is wound up smoothly on the center of the reel.

T guide roller height adjustment

Tool: Roller guide adjustment jig (J-6105-930-A)

1. Remove the cap of the T guide roller and install the roller height adjustment jig. In this case, do not tighten the jig any farther than it can be installed easily.
2. Loosen the screw securing the roller guide.
3. Thread a blank tape and play it.
4. Turn the adjustment jig clockwise or counterclockwise so that the tape runs on the center of the T guide roller reel without rubbing the flange at all.

Jig turn direction	Guide roller
Clockwise	Down
Counterclockwise	Up

5. Tighten the screw for the roller guide, then check the height again.
6. Remove the adjustment jig and install the cap on the guide roller.

3-2-4. Timer Roller Height Check and Adjustment

Tool: 1.5mm hexagonal wrench

Preliminaries

Always check the height of the timer roller after replacing each head assy or the entire HBU. Always adjust the height of the new timer roller after replacing the timer roller.

Timer roller height check

Mount a tape and play it. Check that there is no gap or curling where the tape meets the upper roller flange and that the tape does not curl about the lower flange of the G1 tape guide on the HBU. If this is the case, there is no need to adjust the height of the timer roller.

Timer roller height adjustment

Tool: Roller guide adjustment jig (J-6105-930-A)

1. Remove the top plate and the ornamental panel.
2. Remove the cap of the timer roller.
3. Install the roller height adjustment jig in place of the cap. In this case, do not tighten the jig any farther than it can be installed easily.
4. Loosen the two screws securing the lower flange.

5. Thread a blank tape and play it, and turn the adjustment jig clockwise or counterclockwise to the point at which the tape and the top flange of the roller just begin to contact each other.

Jig turn direction	Timer roller
Counterclockwise	Up
Clockwise	Down

6. Turn the jig 45 degrees clockwise from the point in step 5 to lower the roller.
7. Once the adjustment is over, tighten the screws for the lower flange.
8. Remove the adjustment jig and install the cap on the timer roller.

3-2-5. Reel Table Height Adjustment

1. Thread a blank tape and set the unit in the SLOW FF mode.
 2. Check that the tape is wound up without rubbing the flange of the S-side reel.
 3. Set the unit in the SLOW REWIND mode.
 4. Check that the tape is wound up without rubbing the flange of the T-side reel.
- The height of the reel base is not adjusted. If the check below shows that the tape is rubbing against the reel flange, adjust the following adjustments.

3-2-2. S Guide Roller Height Adjustment

3-2-3. T Guide Roller Height Adjustment

3-2-4. Timer Roller Height Adjustment

3-2-6. Tape Shifter Position Check and Adjustment

Tape shifter Position check

1. Thread a blank tape and set the unit in the FF or REW mode.
2. Make sure that the tape is 0.5mm apart from the D/M REC head. (See the figure below.)
3. Set the unit in the STOP mode.

4. Check that there is clearance between the tape and the shifter, as shown in the figure above.

Tape Shifter position adjustment

The clearance between the tape and head during the FF mode is adjusted by adjusting the position of the shifter plunger.

1. Loosen the two +PS3x4 screws and washers holding the plunger shown in the figure below.

2. Thread a blank tape and set the unit in the SLOW WIND mode.
3. Move the plunger to the left or right to a position at which the clearance between the D/M REC head and tape is 0.5mm, then tighten the screw.

Direction the plunger is moved	Clearance between the tape and the D/M REC head
←	Widens
→	Narrows

3-2-7. Final Check of the Tape Path System

After checking that the screws holding the S guide roller, timer roller, T guide roller, and the shifter plunger are tightened, thread a tape and play it. Check that the tape is not curling at HBU G1, G2 and G3 and that there is no sound from tape rubbing against the roller flanges. Then, set the unit in the REW mode and check that there is a clearance between the tape and each roller plus reel flanges.

3-3. TAPE SHIFTER MECHANISM REPLACEMENT AND ADJUSTMENT

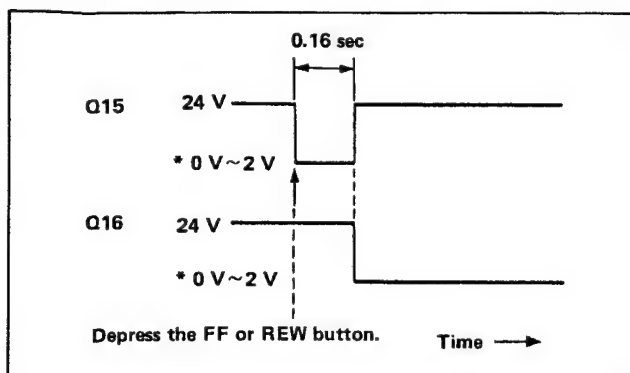

3-3-1. Checking Performance

- (1) Check that none of the ceramic part of the shifter has worn away where the tape passes over it. (checked by the eye.)
- (2) Make sure that when a tape is threaded, the shifter does not touch it.
- (3) There must be clearance between the tape and the D/M REC head when the shifter is activated during FF, REW or SLOW WIND mode. (See Section 3-2-6 "Tape shifter position check and adjustment.")
- (4) The shifter must return to its original position when the tape is taken up by FF or REW mode.

3-3-2. Plunger Solenoid Replacement and Adjustment

(1) Replacement period

1. When the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2 is up.
2. If the plunger solenoid no longer satisfies the performance indicated in 3-3-1. At this time, the voltage at the collector pins of transistors Q15 and Q16 on the TPC-1 board must be as shown in the figure below. (See the Value indicated by * in the figure.)
If these voltages are not like the following, repair the TPC-1 board.

(2) Replacement method

1. Pull out the CN409 connector on the TPC-1 board, then cut the cable tie so that the plunger harness can be removed.
2. Remove the two +PS3x4 screws and washers shown in the figure below, then lift up the plunger, remove the limiter spring and the shifter link, then remove the plunger.
Next pull out the harness.

3. Remove the E ring from the top of the plunger pole and remove the two washers and the spring.
4. Place the two washers and the spring on the pole of the replaced plunger and secure them with the E ring.

5. Install the plunger by reversing the procedure given in Step 2. Sandwich the shifter link between the two washers as shown in the figure below.

3-3-3. Tape Shifter Replacement

(1) Replacement period

Since the shifters used in the PCM-3402 are ceramic, they wear out quite slowly. If they wear out to the point that it is visible to the eye, either rotate the ceramic part of the shifter so that a different part of it touches the tape or replace the tape shifter entirely.

(2) How to rotate the section that touches the tape

1. Turn the shifter cap clockwise to loosen it.
2. Turn the shifter ring about 90 degrees so that a part of the ring that is not worn touches the tape.
3. Turn the shifter cap counterclockwise to tighten it.
4. Apply screw locking solution to the head of the cap.

(3) Replacing the tape shifter

1. Turn the shifter cap clockwise, then remove it.
2. Remove the O ring and shifter ring by pulling them up.
3. Insert the new O ring and shifter ring, then tighten down the shifter cap.
4. Apply screw locking solution to the head of the cap

3-3-4. Tape Fast-forward Check and Adjustment

Carry out the final check of the tape path system as explained in Section 3-2-7.

3-4. TIMER ROLLER REPLACEMENT AND ADJUSTMENT

3-4-1. Timer Roller Assembly Replacement and Adjustment

(1) Replacement period

Replace the timer roller assembly after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

(2) Replacement method

1. Remove the connector from the SE-53 board.
2. Remove the three +PSW3x12 screws securing the timer roller assembly.
3. Check that the roller and flange of the replacement timer roller are not damaged. Turn the replacement timer roller by hand and make sure it does not make any abnormal sounds.
4. Install the replacement timer roller assembly with the three +PSW3x12 screws.
5. Plug in the connector.
6. Clean the roller.

(3) Adjustment

Adjust the height of the timer roller as explained in Section 3-2-4.

3-4-2. Replacing the Timer Roller Bearing

(1) Replacement period

- Replace the timer roller bearing after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.
- Replace the timer roller bearing if there are strange noises when the timer roller turns.

(2) Replacement method

1. Turn the roller cap assembly counter-clockwise and remove it.
2. Remove the upper flange, roller and bearing by lifting them up.
3. Apply Sony Grease SGL505 to the lower part of the shaft indicated with diagonal lines in the figure and insert the bearing.
4. Apply Sony Grease SGL505 to the upper and lower parts of the inside of the roller indicated with diagonal lines in the figure and insert the roller.

5. Apply Sony Grease SGL505 to the upper part of the shaft and insert the replacement bearing.

6. Mount the upper flange, then turn the roller cap assembly clockwise to install it.

(3) Adjustment method

Adjust the height of the timer roller as explained in Section 3-2-4.

3-5. TENSION ARM REPLACEMENT AND ADJUSTMENT

3-5-1. Tension Arm Assembly Replacement

(1) Replacement period

Replace the tension arm assembly after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

(2) Replacement method

1. Remove the connector from the SE-54 board.
2. Remove the three +PSW3x8 screws securing the tension arm assembly and remove the tension arm assembly.

3. Check that there are no scratches or cracks in the ceramic section of the tension arm. Also, move the arm to the left and right by hand and make sure that it moves smoothly.
4. Install the replacement tension arm assembly with the three +PSW3x8 screws.
5. Clean the ceramic part of the tension arm.

3-5-2. Tension Arm Adjustment

1. Connect the oscilloscope between ground (the frame will do) and TP1 on the SE-54 board.
2. Move the tension arm to the left and right and adjust the level with VR2 and the offset with VR1 so that the voltage ranges from -3V to +3V.

3. Disconnect the connector, mount a tape, press the PLAY button to put the system in play mode, then press the STOP button.
4. Adjust the tension as explained in 3-5-3.
5. Plug in the connector, then loosen the two +PSW3x4 screws holding the SE-54 board in place. Slide the SE-54 board to the left and right to the point where the voltage at TP1 reads 0V on the oscilloscope, then retighten the screws.

6. Repeat the cycle of playing the tape then stopping it two or three times and make sure that the voltage at TP1 is within 0.2V of 0V.
7. Perform steps 2 through 5 several times.

3-5-3. Tension Check and Adjustment

Check

1. Disconnect the connector from the SE-54 board.
2. mount a blank tape and play it.
3. Insert the tentelometer at Point (A) in the figure below and make sure that the tension is $90g \pm 20g$. Insert the tension meter at Point (B) in the figure below and make sure that the tension is $105g \pm 20g$.

4. Plug in the connector to the SE-54 board, play the tape, and double check the tension at Points (A) and (B).

Adjustment

1. Disconnect the connector from the SE-54 board.
2. Mount a blank tape and play it.
3. Insert the tentelometer at Point (A) in the figure above and adjust VR1 on the DR-54 board so that the tension is $90g \pm 20g$. Insert the tentelometer at Point (B) in the figure above and adjust VR2 on the DR-54 board so that the tension is $105g \pm 20g$.

Measurement point	Tension	DR-54 board
(A)	$90g \pm 20g$	VR1
(B)	$105g \pm 20g$	VR2

DR-54 board

3-6. GUIDE ROLLER REPLACEMENT AND ADJUSTMENT

3-6-1. Replacing the S Guide Roller Assembly

(1) Replacement period

Replace the S guide roller assembly after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

(2) Replacing the S guide roller assembly

1. Remove the three +PSW3x10 screws securing the S guide roller assembly.
2. Check that the roller and flange of the replacement guide roller are not damaged. Turn the replacement roller by hand and make sure it does not make any abnormal noises.
3. Mount the replacement guide roller assembly on the chassis and install it with the three +PSW3x10 screws.
4. Clean the roller

(3) Adjustment method

How to adjust the S guide roller

Adjust the S guide roller height as explained in 3-2-2 and adjust the reel table height as explained in 3-2-5.

3-6-2. Replacing the T Guide Roller

(1) Replacement period

Replace the T guide roller after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

(2) Replacing the T guide roller

1. Remove the T guide roller cap.
2. Remove the roller and the bearing.
3. Apply Sony Grease SGL505 to the part of the shaft and the replacement roller indicated with diagonal lines in the figure below and insert the bearing.

4. Insert the replacement roller.
5. Apply Sony Grease SGL505 to the part of the shaft and the roller indicated with diagonal lines in the figure and insert the bearing.
6. Mount the cap

3-6-3. Replacing the Guide Roller Bearing

(1) Replacement period

Replace the guide roller bearing after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

(2) Replacement method

1. Turn the guide roller cap by hand and remove it, then remove the guide roller and bearing.
2. Apply Sony Grease SGL505 to the part of the shaft and the replacement bearing indicated with diagonal lines in the figure below and insert the bearing.
3. Insert the roller.
4. Apply Sony Grease SGL505 to the part of the shaft and the roller indicated with diagonal lines in the figure below and insert the replacement bearing.

5. Mount the cap by screwing it on by hand.
6. Turn the roller by hand and make sure it does not make any abnormal noises.
7. Clean the roller

(3) Adjustment method

Check the heights of the S and T guide rollers and adjust them, if necessary. (See section 3-2-2 and 3-2-3.)

3-7. REEL MOTOR REPLACEMENT AND ADJUSTMENT

Tool: 1.5mm hexagonal wrench

3-7-1. Reel Motor Replacement

(1) Replacement period

- Replace the reel motor after the period listed in the periodic Inspection and Maintenance Schedule given in Section 2.
- Replace the reel motor if it makes strange noises when it turns.

(2) Preparations for replacing the reel motor

1. Remove the top plate.
2. Open the heat sink on the DR-54 board.

(3) Replacement method

1. Disconnect the CN462 (S side) and CN463 (T side) connectors from the DR-54 board.
2. Peel off the reel sheet from the reel table. (The only thing holding the reel sheet to the reel table is the protrusion on the reel sheet.)
3. Remove the three +B3x6 screws shown in the figure on the right, then remove the reel table.
4. Loosen the screws securing the reel base, then pull the reel base up and away, holding the brake plunger in the direction indicated by arrow in the figure on the right and with the brake off.
5. While holding the reel motor from below so that it does not fall, loosen the three +PS4x8 screws securing the reel motor, then remove these screws. (See the figure on the right.)
6. While pulling the bottom of the reel motor to the front of the machine, pull the reel motor to the bottom of the chassis and remove it from the side of the chassis. (If it is too difficult to remove the reel motor this way, it is also possible to remove the three +PSW4x10 screws and pull the reel mounting plate upwards.

7. Turn the shaft of the replacement reel motor by hand to check that it moves smoothly without any strange noise.
8. Install the replacement reel motor by reversing the procedure with which the old reel motor was removed. Install the reel tube and the reel base.
9. Check the brake torque as explained in Section 3-8.
10. Install the reel table and reel sheet.
11. Plug in the CN462 (S side) and CN463 (T side) connectors into the DR-54 board.
12. Adjust the tension as explained in 3-5-3.

3-7-2. Brake Band Replacement

Tool: 1.5mm hexagonal wrench

(1) Replacement period

- Replace the brake band after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.
- Replace the brake band if the brake makes a strange noise.

(2) Replacement method

1. Remove the reel sheet, the reel table, and the reel base as shown in the figure below.

2. Remove the two E2.3 rings. (See the figure below.)

3. Pull the brake band up and away.

4. Check that the replacement brake band is straight, not bent and that the surface of the brake band is clean.

5. Mount the replacement brake band on the brake link and secure it with the two E2.3 rings.

6. While holding the brake plunger in the direction shown by the arrow in the figure below, make sure that the brake band is attached comfortably to the brake band guide and that there are no gaps between the brake band and the brake band guide. Check that the brake band is not bent at points (A) and (B) in the figure below.

7. If the brake band is bent at point (A) or Point (B) or there are gaps between the brake band and the brake band guide, loosen the +PSW3x6 screw securing the brake plunger and adjust the position of the plunger.

8. Install the reel base, reel table, and reel sheet.

9. Check the brake torque and adjust it as explained in Section 3-8.

3-7-3. Brake Plunger Replacement

(1) Replacement period

- . Replace the brake plunger after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.
- . Replace the brake plunger if it stops working.

(2) Replacement method

1. Remove the +PSW3x6 screw securing the brake plunger, then remove the plunger unit from the brake link and remove the plunger unit.

2. Remove the two +PSW3x6 screws and remove the plunger mounting plate and plunger. At this time, the stopper pin on the plunger pole piece is also removed, so the pole is separated from the main portion of the plunger unit.

3. Make sure that the pole piece moves smoothly in and out of the main unit of the replacement plunger.
4. Use a multimeter to check that the leads (for the coil) of the replacement plunger are not cut.
5. Install the link, stopper pin, washer, and compression coil spring on the replacement plunger and secure the plunger to the plunger mounting plate with the two +PSW3x6 screws.
6. Install the plunger and its mounting plate at the position that gives the longest plunger stroke and secure it with the two PSW3x6 screws.
7. Mount the link and the joint, then install the plunger unit on the reel assembly with a +PSW3x6 screw.
8. Adjust the position of the plunger as explained in Section 3-7-2.
9. Adjust the brake torques as explained in Section 3-8.
10. Plug in the plunger leads into CN406 (S side) and CN408 (T side) of the TPC-1 board.

3-8. BRAKE TORQUE ADJUSTMENT

Check

1. Mount the drum open torque measuring reel (9-911-041-01) on the reel table (as in the figure below) and pull the other end of the dial string with a tension gauge.
2. Specification: Drive torque of 125g or less
Back torque of 600-800g

Adjustment

Set up the measuring reel and tension gauge as shown in the figure on the right then proceed with the adjustment.

1. If the drive torque is more than 125g, move the spring from Position b to Position a. If the back torque is less than 600g, move the spring from Position b to Position c.
2. If the torque still does not meet the specifications, loosen the +PSW3x6 screw and adjust the torque by moving the stopper plate.
600g or less Increase the dimension.
800g or more Decrease the A dimension.
(The design value for Dimension A is 0.5- 1.5mm.)

3-9. PINCH ROLLER MECHANISM REPLACEMENT AND ADJUSTMENT

3-9-1. Pinch Roller Pack Replacement

(1) Replacement period

- Replace the pinch roller pack after the period listed in the periodic Inspection and Maintenance Schedule given in Section 2.

Replace the pinch roller pack if any of the following problems occur.

- The pinch roller is damaged or extremely dirty.
- Even though the pinch pressure is normal during playing, the phase meter on the CTL board runs.
- When you touch the pinch roller cap, it makes a rumbling noise similar to that made by worn out bearings.

(2) Replacement method

1. Turn the pinch roller cap counter-clockwise as shown in the figure below.
2. Pull up the pinch roller pack.

3. Check that the replacement pinch roller pack is not scratched or dirty.
4. Mount the replacement pinch roller pack on the shaft, then install the pinch roller cap.
5. Turn the pinch roller pack by hand and check that it moves smoothly.
6. Check the pinch pressure as explained in 3-9-5.

3-9-2. Pinch Preplunger Replacement

(1) Replacement period

- Replace the pinch preplunger after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

Replace the pinch preplunger if any of the following problems occurs.

- After mounting a tape, the plunger does not move when the PLAY button is pressed.
- After a tape has been completely rewound or fast forwarded, the pinch roller is not retracted.

(2) Replacement method

1. Remove the CN403 and CN413 connectors from the TPC-1 board.
2. Remove the two +PS3x10 screws and the +B3x6 screw shown in the figure below.

3. Remove the pinch roller unit by pulling it up.
4. Remove the plunger spring at the plunger pole side.

5. Remove the two +PS2.6x4 screws and washers, shown in the figure below.

6. Make sure that the pole of the replacement plunger and the main body of the plunger unit move in and out smoothly.
7. Use a multimeter to check that the coil of the replacement plunger is no cut.
8. Press the replacement plunger in the direction indicated by the arrow in the figure so that its stroke is as short as possible, then secure it with the two +PS2.6x4 screws and washers.
9. Press on Point A with your hand and make sure that the link moves smoothly and that the plunger is returned smoothly.

10. Assemble and adjust the pinch roller mechanism as explained in Section 3-9-4.

3-9-3. Pinch Plunger Replacement

(1) Replacement period

- . Replace the pinch plunger after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

Replace the pinch plunger if the following problem occurs.

- . When the play button is pressed, the pinch roller does not press against the capstan.

(2) Replacement method

1. Remove the CN403 and CN413 connectors from the TPC-1 board.
2. Remove the two +PS3x10 screws and the +B3x6 screw shown in the figure below.

3. Remove the pinch roller unit by pulling it up.
4. Remove the two +PSW3x6 screws securing the plunger, then pull the main body of the plunger.

5. Remove the tension coil spring attached to the lower part of the stopper pin, as shown in the figure below.
6. Pull the pole piece, shown in the figure, down and away.

7. Make sure that the pole piece of the replacement plunger and the main body of the plunger unit move in and out smoothly.
8. Use a multimeter to check that the coil of the plunger is not cut.
9. Insert the replacement pole piece into the stopper pin from below.

10. Insert the pole piece into the main body of the plunger, then secure it to the plunger mounting plate with the two +PSW3x6 screws.
11. Install the main body of the plunger all the way in the direction of the arrow as shown in the figure below.

12. Hook the tension coil spring on the stopper pin.
13. Press the pole piece by hand and check that it moves smoothly and that it is returned when you let go.

3-9-4. Assembling and Adjusting the Pinch Roller Mechanism

(1) Assembly

1. Drop the protrusion on the pinch arm shaft into the positioning hole on the capstan bracket assy as shown in the figure below.

2. Install the pinch roller mechanism with the two +PS3x10 screws and the +B3x6 screw.
3. Connect the lead harness of the preplunger to connector CN413 on the TPC-1 board and connect the lead harness of the pinch plunger to connector CN403 on the TPC-1 board.
4. Bundle the harness with the wire tie.

(2) Adjustment

1. Mount a blank tape and play it.
2. Turn the clearance adjustment screw +P3x16 shown in the figure below clockwise to the point where the pinch roller presses the tape lightly against the capstan.
3. Return the clearance adjustment screw back 90 degrees from the point where the pinch roller presses the tape against the capstan lightly.
4. Stop the tape and make sure that it is touching neither the pinch roller nor the capstan.

5. If the pinch roller is touching the tape, play the tape, turn the clearance adjustment screw +P3x16 to the point where the pinch roller presses the tape lightly against the capstan, then return the clearance adjustment screw less than 90 degrees.

3-9-5. Checking the Pinch Roller Pressure

Tool: 4kg Tension gauge (9-911-043-01)

1. Mount a blank tape and play it.
2. Attach the dial thread to the shaft of the pinch roller as shown in the figure below, then pull on the other end of the thread with a 4kg tension gauge.

3. While touching the pinch roller lightly with a finger, pull on the tension gauge and read off the tension at which the roller stops turning. Check whether this tension meets the specification for the pinch roller pressure.
Specification: at least 1.2kg

3-10. CAPSTAN MOTOR REPLACEMENT AND ADJUSTMENT

3-10-1. Capstan Motor Replacement

(1) Replacement period

- . Replace the capstan motor after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.

Replace the capstan motor if any of the following problems occur.

- . The capstan turns abnormally.
- . The capstan shaft is bent.

(2) Replacement method

1. Disconnect the CN464, CN465, and CN467 connectors on the DR-54 board.
2. Remove the pinch roller unit as explained in Section 3-9-3.
3. Remove the three +PSW4x8 screws, shown in the figure below.
4. Pull the capstan motor unit up and remove it.
5. Remove the three hexagonal inch bolts, then remove the capstan motor and the capstan bracket assy, which are shown in the figure below.

6. Make sure that there are no scratches or cracks on the shaft of the replacement capstan motor.
7. Install the new capstan motor by reversing the procedure given in Steps 1-5 above.

8. Assemble and adjust the pinch roller mechanism as explained in Section 3-9-4.
9. Check the pinch pressure as explained in 3-9-5.
10. Check the tape path and make any necessary adjustment as explained in Section 3-2.
11. Check the servo gain and phase of the CTL board and make any necessary adjustments as explained in Section 3-10-2.

3-10-2. Checking and Adjusting the CTL-1 Board Servo Gain and Phase

Applicable Board No.:

1-620-310-12 only

1. Pull out the CTL board with an extension board.
2. Turn VR3 all the way to the left.
3. Connect a wow meter (Meguro MK615 or 616) between TPE and TP2.

Wow meter settings: Carrier frequency

Tape Speed: 10kHz at Low speed

Tape Speed: 20kHz at High speed

L.P.F. 2kHz

UNWEIGHTED RMS

VR1: PHASE OFFSET

VR2: SERVO GAIN

VR3: PHASE GAIN

4. Mount a blank tape and set the unit in REC PLAY mode.
MCK board settings: Fs 48kHz
Tape speed: Low
5. Adjust VR2 to obtain the wow meter readings.

CTL board	VR2
WOW Specification	no more than 0.035

(The capstan motor does not make any strange noises.)

6. Adjust VR1 so that the 4th green LED from the bottom on the phase meter of the front of the CTL board lights up.

CTL-1 board	VR1
Phase meter	4th green LED from the bottom lights up

- ☐
- ☐
- ☐
- ☐
- ☒ Lights up
- ☐
- ☐
- ☐

7. Switch the Tape Speed switch on the MCK board to High and check that the 4th phase meter LED (green) from the bottom lights up. If the 3rd LED lights up, adjust VR1 using the procedure in Step 6, only adjust so that the 5th LED from the bottom lights up.

- ☐
- ☐
- ☐
- ☒ Lights up
- ☐
- ☐
- ☐
- ☐

8. Check that at this time the wow meter reads no more than 0.035%.
9. Check in both of the following modes that the capstan motor makes no strange noises, that the wow is no greater than 0.02%, and that the 4th or 5th LED from the bottom lights up on the phase meter.

Tape speed	Vari	FS
HIGH	+12.5%	48kHz
LOW	-12.5%	44.056kHz

10. Playback a PCM-3402 alignment tape with a tape speed of +0.2% and -0.2% and adjust RV3 so that the following conditions are met.

MCK board setting: Tape speed High
Fs 48kHz

Tape Speed	Phase LED
+0.2%	3rd LED from the top lights up.
-0.2%	3rd LED from the top lights up.

If these conditions can not be met within the above adjustment range for VR3, it is ok if the 2nd LED from the top (yellow) and the 2nd LED from the bottom light up (yellow).

11. Playback a PCM-3402 alignment tape at $\pm 0\%$ and check that of the two LEDs in the middle of the phase meter, either one lights up, both light up, or one lights up and the other blinks.

Checking and Adjusting the CTL-1 Board Servo Gain and Phase

Applicable Board No.:

1-620-310-13 and higher

Caution: This item (3-10-2) is only applicable to CTL-1 Board with Board No. 1-620-310-13 and higher.

Refer to the previous page for the boards with Board No. 1-620-310-12.

1. Pull out the CTL-1 board with an extension board.
2. Set VR4 in the vertical position, as shown in the following figure.

3. Connect a wow meter (Meguro MK615 or 616) between TPE and TP2.
4. Set the Test switch #3 of the MCK board in the up (ON) position.

Wow meter settings: Carrier frequency

Tape Speed: 10kHz at Low speed

Tape Speed: 20kHz at High speed

L.P.F. 200Hz

UNWEIGHTED RMS

VR1: PHASE OFFSET

VR2: SERVO GAIN LOW SPEED

VR3: SERVO GAIN HIGH SPEED

VR4: PHASE GAIN

5. Mount a blank tape and set the unit in REC PLAY MODE.

MCK-1 board settings: Fs 48kHz

Tape speed: High

Function panel settings: +30% VARL SPEED

6. Adjust VR3 until the capstan motor starts to oscillate. (A steady high tone will be heard.)
7. Function panel settings: -30%
MCK board settings: Fs 44.056kHz
Tape speed: High
8. Check that the capstan motor is not oscillating. If it is oscillating, adjust RV3 until the oscillation stops.
9. MCK board settings: Fs 48kHz
Tape speed: High
Function panel settings: 0% VARI SPEED
Check that the wow is less than 0.025% by using a wow meter.

CTL-1 board	VR2
WOW Specification	0.025%

10. Adjust VR1 so that the 4th green LED from the bottom on the phase meter of the front of the CTL-1 board lights up.

CTL-1 board	VR1
Phase meter	4th green LED from the bottom lights up.

○
○
○
● Lights up
○
○
○

11. Switch the Tape Speed switch on the MCK board to Low, mount a blank tape, and set the unit in REC PLAY mode.
MCK board settings: Fs 48kHz
Tape speed: Low
Function panel settings: +30% VARI SPEED
12. Adjust VR2 until the capstan motor starts to oscillate. (A steady high tone will be heard.)
13. Function panel settings: -30% VARI SPEED
MCK board settings: Fs 44.056kHz
14. Check that the capstan motor is not oscillating. If it is oscillating, adjust RV2 until the oscillation stops.
15. Function panel settings: 0% VARI SPEED
MCK board settings: Fs 48kHz
Check that at this time the wow meter reads no more than 0.025%.

16. Check in both of the following modes that the capstan motor makes no strange noises, that the wow is no greater than 0.03%, and that the 4th or 5th LED from the bottom lights up on the phase meter.

Tape Speed	Vari	FS
HIGH	+12.5%	48kHz
LOW	-12.5%	44.056kHz

17. Play back a AR3402-1 alignment tape with a tape speed of +0.2% and -0.2% and adjust RV4 and RV1 so that the following conditions are met.

The phase servo gain is adjusted by RV4. When RV4 is turned clockwise (the gain is increased), the LED blinking becomes faster when the alignment tape with a tape speed of $\pm 0.2\%$ is played back.

Example:

The phase servo offset is adjusted by RV1. When RV1 is turned clockwise, the position of the lighted LEDs moves downward.

Example:

MCK-1 board settings: Tape speed High
Fs 48kHz

Tape Speed	Phase LED
-0.2%	3rd LED from the bottom lights up.
+0.2%	3rd LED from the top lights up.

If these conditions can not be met within the above adjustment range for VR3, it is ok if the 2nd LED from the top (yellow) and the 2nd LED from the bottom light up (yellow).

18. Playback the AR3402-1 alignment tape at the portion with the tape speed of $\pm 10\%$ and check that of the two LEDs in the middle of the phase meter, either one or both light up or blink.

19. Set the Test switch #3 of the MCK board in the down (OFF) position.

3-11. HEAD BLOCK UNIT REPLACEMENT AND ADJUSTMENT

Tool:

Analog extension cable (J-6101-260-A)
Extension board
Head zenith block (J-6105-960-A)
1.5mm hexagonal wrench
Torque driver
M2.6 Phillips screwdriver
M4.0 Phillips screwdriver
Jeweler screwdriver

3-11-1. Overview of Head Replacement

The head block unit (HBU) of the PCM-3402 comprises the following four heads:

- Two digital recording (D/REC) heads
- One digital playback (D/PB) head
- One analog recording/playback and erase (A/E-RP) head

If these heads wear out or are damaged, they must be replaced and the new head adjusted.

There are two ways to replace heads.

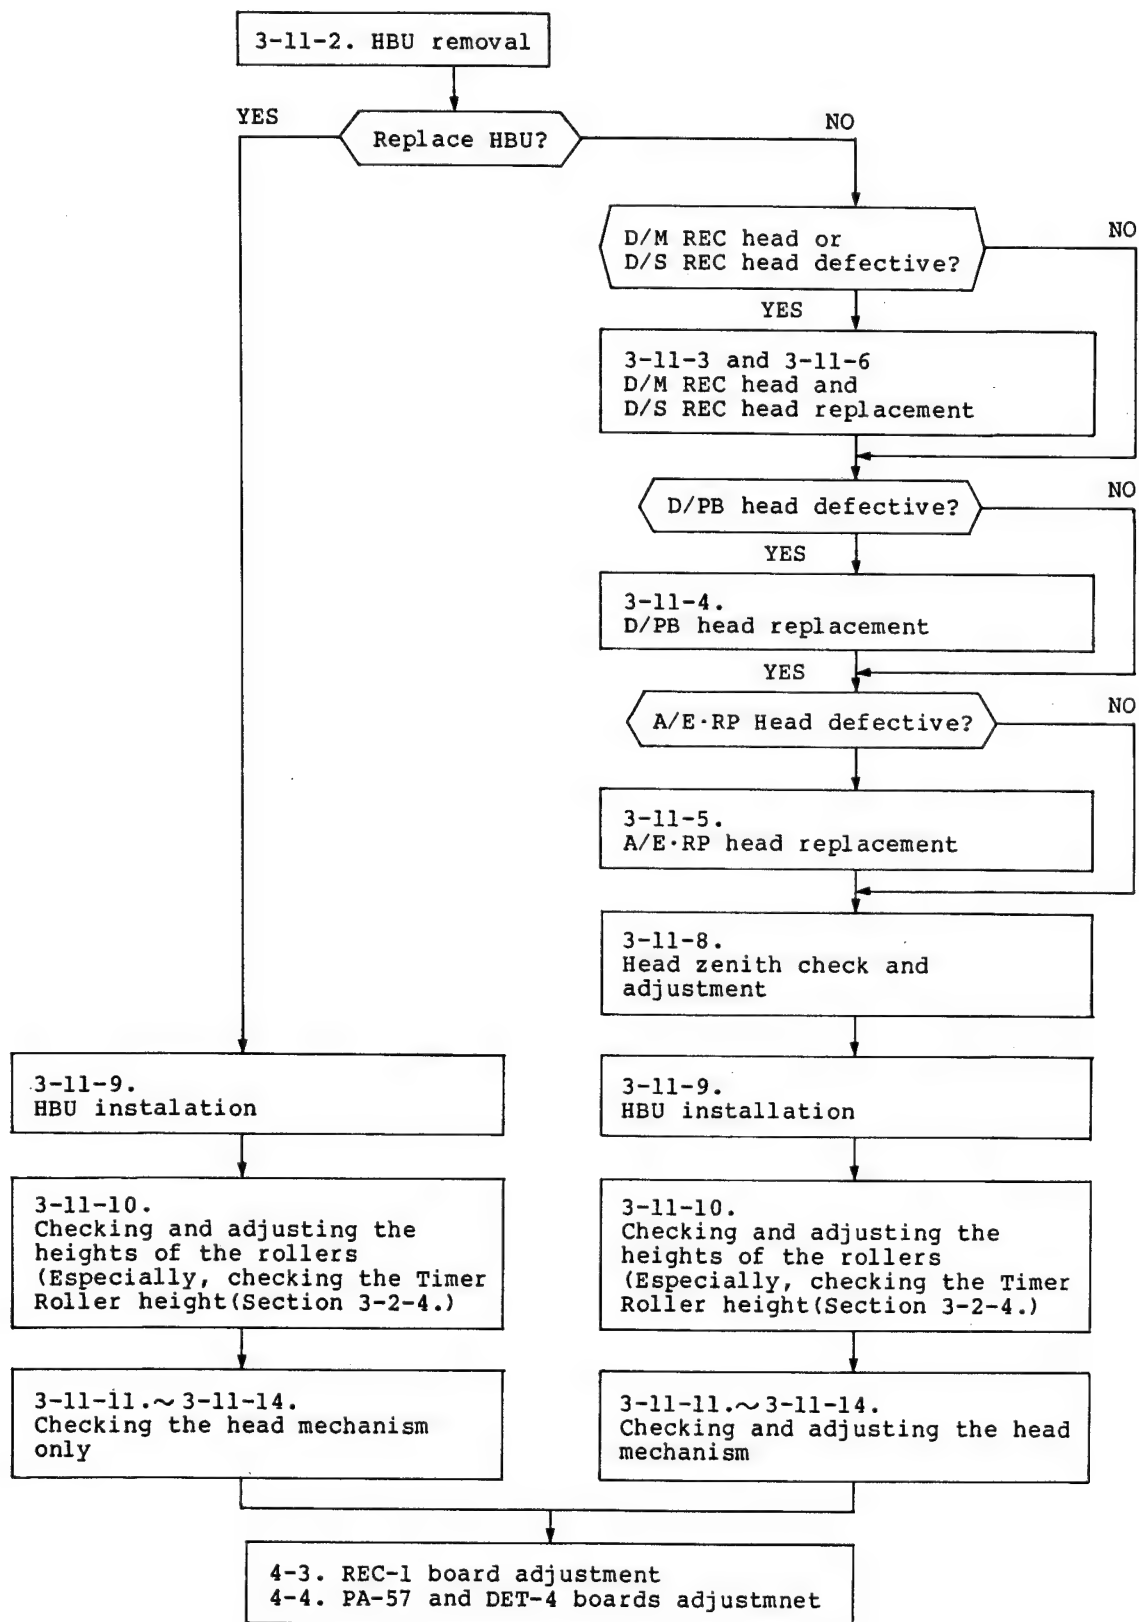

1. HBU replacement

In normal use, all the heads wear out at the same rate, so the entire head block unit is replaced.

2. Replacing individual head assemblies

If one head is damaged, that individual head assembly can be replaced.

It takes only a little time to replace the head block unit (and in principle there is no need for mechanical adjustment of the individual heads). When faced with one damaged head in a head block unit that is fairly worn, either method may be used as necessary.

END
Head Replacement Procedure Flowchart

3-11-2. HBU Removal

1. Remove the top plate and the ornamental panel as explained in Section 1-2-1.
2. Remove the front plate and the pad as explained in 1-2-2.
3. Remove the +PSW3x6 screw and the upper wire shield, shown in the figure below.
4. Remove the four connectors shown in the figure below.
5. Remove the +PSW2.6x6 screw and remove the ground lead, shown in the figure below.
6. Remove the three +PSW4x10 screws, then remove the head block unit. See the figure below.

3-11-3. D/M REC Head Replacement

The D/M recording head is shown in the figure below.

1. Removing the left and inner head shields
Remove the three +PS2.6x8 screws, then remove the left and inner head shields.

2. Removing the D/M REC head assembly
(shown in the figure on the right)

- 1) Remove the two PS2.6x8 screws, then remove the connector installation plate.
- 2) Remove the M3x4 screw
- 3) Remove the B2.6x4 screw and the 2.6 washer.
- 4) Pull the D/M REC head down and away.

Note: Wipe any screw lock solution on the head block unit base completely away.

3. Assembling the D/M REC head assembly

- 1) Remove the connector installation plate from the old D/M REC head assembly and install it on the replacement D/M REC head assembly.
- 2) Line up the pin coming out from the D head plate (2) assy with the slot on the D head plate (upper) assembly. Sandwich the compression coil spring in the hole of the D head plate (2) assy, and insert the boss of the D head plate (upper) assembly.
- 3) Use the +B2.6x4 screw and washer to lock the boss of the D head plate (upper) assembly.
- 4) Assemble by reversing the procedure given in 1)-3) of the Step 2 above.

4. Install the left and inner head shields.

3-11-4. D/PB Head Replacement

1. Removing the left and inner head shields.

- 1) Remove the three +PS2.6x8 screws, then remove the left and inner head shields. (See Step 1 of Section 3-11-3.

2. Removing the D/PB head assembly

- 1) Remove the two +PS2.6x8 screws, then remove the connector installation plate from the head block unit base.
- 2) Loosen the M3x4 hex screw holding the head block unit base.
- 3) Remove the +B2.6x4 screw and the 2.6 washer.
- 4) Pull the D/PB head assembly down and away.

Note: Wipe any screw lock solution on the head block unit base completely away.

3. assembling the D/PB head assembly

- 1) Remove the connector installation plate from the old D/PB head assembly and install it on the replacement D/PB head assembly.
- 2) Line up the pin coming out from the head block unit base with the slot on the D head plate (upper) assembly. Sandwich the compression coil spring in the hole of the head block unit base, and insert the boss of the D head plate (upper) assembly.
- 3) Use the +B2.6x4 screw and washer to lock the boss of the D head plate (upper) assembly.
- 4) Assemble by reversing the procedure given in 1)-3) of Step 2 above.

4. Install the left and inner head shields.

3-11-5. A/E.RP Head Replacement

1. Removing the A/E.RP head assembly

- 1) Remove the two +PS2.6x8 screws, then remove the connector installation plate from the head block unit base.
- 2) Loosen the M3x4 set screw holding the head block unit base.
- 3) Remove the +B2.6x4 screw and the 2.6 washer.
- 4) Pull the A/E.RP head down and away.

Note: Wipe any screw lock solution on the head block unit base completely away.

2. Assembly the A/E.RP head assembly

- 1) Remove the connector installation plate from the old A/E.RP head assembly and install it on the replacement A/E.RP head assembly.
- 2) Line up the pin coming out from the head block unit base with the slot on the A head plate (upper) assembly. Sandwich the compression coil spring in the hole of the head block unit base, and insert the boss of the A head plate (upper) assembly.
- 3) Use the +B2.6x4 screw and washer to lock the boss of the A head plate (upper) assembly.
- 4) Assemble by reversing the procedure given in 1)-3) of Step 2 above.

3-11-6. D/S REC Replacement

1. Removing the right head shield

- 1) Remove the two +PS2.6x8 screws, then remove the right head shield.

2. Replace the D/S REC head using the same procedure as that given for the D/M REC head in Section 3-11-3.

3-11-7. Scrape Filter Replacement

(1) Replacement period

- Replace the scrape filter after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.
- Replace the scrape filter if it makes any strange noises.
- Replace the scrape filter if it is scratched.

(2) Replacement method

1. Remove the right head shield as explained in Section 3-11-6.
2. Remove the +PSW3x10 screw.
3. Remove the scrape filter assembly.
4. Install the new scrape filter assembly by following the procedure in Steps 1-3 in reverse.

3-11-8. Head Zenith Check and Adjustment

(1) Checking the zenith

1. Push the head zenith block (J-6105-960-A) in such a way as to avoid scratching the head, as shown in the figure below.
2. Using the tape guide as a reference as shown in the figure below, check that there is no clearance between the head zenith block and the tape guide.

(2) Adjusting the zenith

1. If there is any clearance between the head or the tape guide and the head zenith block, turn the zenith screw to eliminate the clearance.

Note:

- . When replacing each head assembly, there is no need to adjust the head zenith because it has been adjusted at factory shipping.
- . Use a jeweler screwdriver to turn the zenith screw.

Head adjustment screws position

3-11-9. Installing the Head Block Unit

To install a head block unit on which one of the heads has been replaced or a new head block unit, use the following procedure.

1. Mount the head block unit on the head base support post and secure it with the three +PSW4x10 screws. Tighten down these screws in the order (a) → (b) → (c) with a torquedriver and a torque of 16kg-cm. (See the figure shown on the right.)
2. Install the ground lead in its original position with the +PSW2.6x6 and LW2.6 washer. (See the figure on the right.)

Adjust the heights of the rollers, and check the head mechanisms.

Follow the instructions given in the sections of 3-11-10 through 3-11-14 of their checks and adjustments on these cable connections and assembly.

3-11-10. Checking and Adjusting the Heights of the Rollers

Check the heights of the rollers and if necessary adjust them as explained in Sections 3-2-1 through 3-2-4.

3-11-11. Adjusting the Head Azimuth

The head adjustment screws are shown in the figure for zenith adjustment in (2) of Section 3-11-8.

(2) Adjusting the azimuth of the D/PB head

1. Plug the D/PB cable into the D/PB head connector.

2. Adjust the azimuth of the D/PB head in the same manner as described in (1) "Adjusting the azimuth of the D/M REC head".

(3) Adjusting the azimuth of the D/S REC head

1. Plug the D/PB cable into the D/S REC head connector.

2. Adjust the azimuth of the D/S REC head in the same manner as described in (1) "Adjusting the azimuth of the D/M REC head".

(4) Adjusting the azimuth of the A/E.RP head

Tool: Analog extension cable

J-6101-260-A

Extension board

1. Plug the A/E.RP cable into the A/E.RP head connector with an analog extension cable.

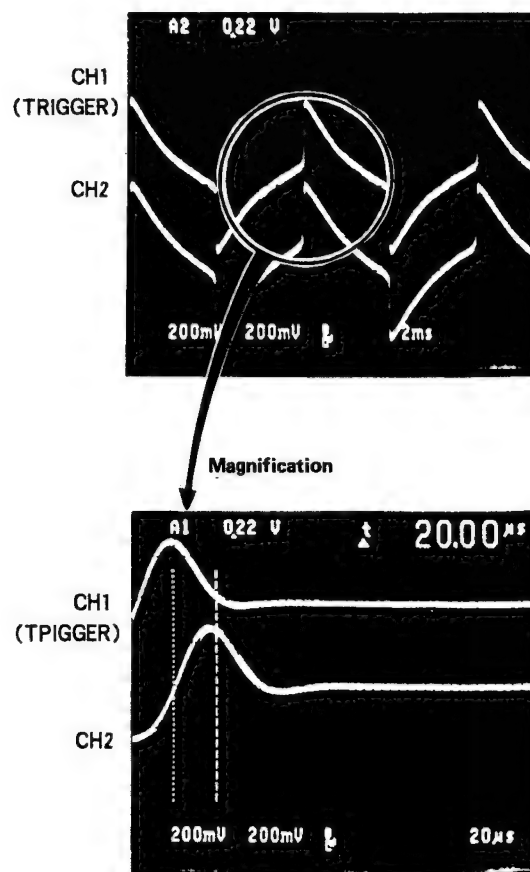

2. Connect the oscilloscope to TP2 of CH2 and TP2 of CH1 of the ARP-1 board.

3. Play the A-RP azimuth section of the AR3402-1 alignment tape.

4. Loosen the A/E.RP head azimuth lock screw.

5. Adjust the A/E.RP head azimuth screw so that the phase difference shown in the figure below is 0.

6. Turn the A/E.RP head azimuth screw further clockwise until the phase difference is 20usec.

7. Tighten the lock screw so that the phase difference is 0.

Adjustment specification: $0 \pm 20\mu\text{sec}$

Note: Always check that the height lock screws for all the heads are tight before adjusting the azimuth.

3-11-12. Head Distance Adjustment

The head distance is only adjusted for the digital heads shown in the figure below. The distance for the analog head is determined by the mechanical precision, so it does not need to be adjusted.

1. Switch on No. 1 and No.3 of DIP switch SW1 on the REC-1 board, shown in the figure below. The 12-block and 4-block frequency test signals are generated. Set SW2 to Test.

2. Connect the head connector and cable as shown in the figure below, mount a blank tape, and record in ADVANCE REC mode.

3. Loosen the two +B2.6x6 screws holding the head plate. The position of these two screws is shown in the figure for adjusting the head zenith in Section 3-11-8.

4. While observing the waveforms at the TP1 pin of TRACK 1A of the REC-1 board and at the TP1 pin of TRACK 1A of the DET-4 board, swing the D/REC head assembly to the left or right with an eccentric screwdriver so that the negative pulse at TP1 of the DET-4 board matches the rising edge of the signal at TP1 of the REC-1 board as shown in the figure below. Observe the phase meter of the CTL board to make sure that the servo is locked.

Adjustment specification: $0 \pm 500\mu\text{sec}$

5. Tighten the two +B2.6x6 screws loosened in Step 3 with a torque of 6kg-cm, making sure that the head assembly does not move as you tighten these screws.

Adjusting the clearance between the D/PB head and the D/S REC head

1. Switch on Pins 1 and 3 of DIP switch SW1 on the REC-1 board. (See the figure below.) The 12-block and 4-block frequency test signals are generated. Set SW2 to Test.

2. Connect the cable and head connector as shown in the figure below, mount a blank tape, and record in monitor mode.

3. Loosen the two +B2.6x6 screws.

4. While observing the waveforms at the TP1 pin of TRACK 1A of the REC-1 board and at the TP1 pin of TRACK 1A of the DET-4 board, swing the D/S REC head assembly to the left or right with an eccentric screwdriver so that the negative pulse at TP1 of the DET-4 board matches the rising edge of the signal at TP1 of the REC-1 board as shown in the figure below.

Observe the phase meter of the CTL-1 board to make sure that the servo is locked.

Adjustment specification: $0 \pm 200\mu\text{sec}$

5. Tighten the two +B2.6x6 screws loosened in Step 3 with a torque of 6kg-cm, making sure that the head assembly does not move when you tighten these screws.

3-11-13. Head Height Adjustment

Here are the connections and check points for adjusting the heights of the heads.

Head	D/M REC	D/PB	D/S REC	A/E.RP
Head connector	D/M REC head connector	D/PB head connector	D/S REC head connector	A/E.RP head connector
Cable	D/PB cable			A/E.RP cable
Check point	DET-4 board TP1 pin for TRACK 2C on the DET-4 board			TP2 pins for CH1 and CH2 on the ARP-1 board

(1) Adjusting the height of the D/M REC head and the D/S REC head

1. Connect the oscilloscope output to a voltage meter.
2. Connect the oscilloscope to TP1 of TRACK 2C on the DET-4 board.
3. Connect the head connector and cable as indicated in the table above and play the D-REC height section of the AR3402-1 alignment tape.
4. Loosen the height lock screw for each of the digital recording heads, adjust the height adjustment screw for each REC head to provide the maximum playback output, and tighten down the height lock screw for each digital REC head.

Check method

Push the four points of the tape slightly with your finger.

- 1 or 2: The level increases. The head is low.
- 3 and 4: The level increases. The head is high.
- 1 and 4: The level increases. The head is tilted toward the left. (Azimuth)
- 2 and 3: The level increases. The head is tilted toward the right. (Azimuth)

Note: If the height lock screw is not tightened down, the tape contact will be inadequate and the output level will be low. Adjust the height to give the maximum output when the height lock screw is tightened down.

(2) Adjusting the height of the D/PB RP head

1. Use the D-PB height section of the AR3402-1 alignment tape and adjust the height of the D/PB head in the same way as just explained for the digital REC heads.

(3) Adjusting the height of the A/E RP head

1. Connect the head connector and cable listed in the table above, then connect the oscilloscope and voltmeter to the specified check points.
2. Play the A-RP section of the AR3402-1 alignment tape and adjust the A/E RP head in the same way as explained for the D/M REC and D/S REC heads.

3-11-14. Head Contact Checking

Here are the connections and check points for checking the head contact.

Head	D/M REC	D/PB	D/S REC	A/E.RP
Head connector	D/M REC head connector	D/PB head connector	D/S REC head connector	A/E.RP head connector
Cable	D/PB cable			A/E.RP cable
Check point	TP1 pin for TRACK 2C on the DET-4 board			TP2 pin for CH1 on the ARP-1 board

Checking the tape contact for the D/M REC head, D/S REC head, and D/PB head

1. Connect the oscilloscope to the TP1 pin of TRACK 2C on the DET-4 board.
2. Connect the head connector and cable as indicated in the table above and play the Digital Head Height section of the AR3402-1 alignment tape AR3402-1. (Use the REC HEIGHT section for REC head and PB HEIGHT section for PB head.)
3. Press the tape just to the left and right of the D/M REC, D/S REC and D/PB heads lightly, as indicated in the figure below, and check that the amplitude of the waves does not increase.

Checking the A/E.RP head contact

1. Connect the oscilloscope to ANALOG OUT CH1(A1) and CH2 (A2) (XLR connector) on the rear panel (or take playback signals from TP2 of CH1 and TP2 of CH2 on the ARP-1 board).
2. Connect the head connector and cable as indicated in the table above, then playback the Analog Head Height section of the AR3402-1 alignment tape.
3. Press the tape just to the left and right of the A/E.RP head lightly and check that the amplitude of the waves does not increase.

3-12. FAN REPLACEMENT

Replacement period

- . Replace the fan after the period listed in the Periodic Inspection and Maintenance Schedule given in Section 2.
- . Replace the fan if it stops turning.
- . Replace the fan if it makes funny noises when it turns.

Replacement method

1. Remove the top plate.
2. Remove the connector for the fan motor.
3. Remove the four +PSW3x30 screws, then remove the fan motor. (See the figure below.)

4. Turn the replacement fan motor by hand and check that it moves smoothly without making any strange noises.
5. Install the replacement fan motor by reversing the procedure given above for removal.
6. Switch on the power and check that the fan turns.

SECTION 4 ELECTRICAL ADJUSTMENTS

INTRODUCTION

This section covers the electrical adjustments required for board repair and maintenance. All of these adjustments assume that all functions other than the one being adjusted are operating normally. When the trouble affects more than one adjustment, we recommend to check all adjustments preceding and subsequent to the adjustment to be performed. This section covers adjustments of switches and controls in the main unit required for meeting specifications. Details on external switches, controls, and operations are in the Operation Manual.

Initial settings

(switch settings for each board)

Board	Switch Name	Mode
SEP-1	EE/PB	PB
ED-16	SPLICE EDIT X' FADE TIME	1
ED-17	E, EDIT X' FADE TIME	2
MCK-1	LOCK MODE	HI
	AUTO CUE	OFF
	Fs	48k
	SPEED	INT
	PROGRAM TC	OFF
MCK-1	REC TC	INT
DIO-2	SDIF-2/AES·EBU	SDIF-2
DAD-1	DIGITAL IN/ANALOG IN	AIN
	EMPHASIS	OFF

Recommended equipment

Equipment	Model	Standard
Oscilloscope	TEKTRONIX 455	2ch, 60MHz
AC voltmeter	HP 400FD	RMS values dB display
Audio meter signal generator level meter distortion meter	ST-1710A	

Note: LINE MONITOR MODE of the switch and control settings means to press any of the Monitor Signal Select Buttons.

AUX MONITOR MODE means to press either of the Auxiliary Track Signal Select Buttons.

4-1. ARP-1 BOARD ADJUSTMENT

This section explains how to adjust the audio signal level and the AUX TRACK recording and playback.

4-1-1. Line Input /output Adjustment

This adjustment should be carried out whenever the ARP-1 or DAD-1 board is replaced.

Equipment required

Audio signal generator

Audio level meter

Oscilloscope

Connections

Switch and control settings

Monitor housing	REF MARKER	: -20dB
	SCALE SW	: 0.2dB
	LINE MONITOR MODE	: INPUT
MCK-1 board	TAPE SPEED	: HI
	Fs MODE	: 48k
DAD-1 board	EMP ON/OFF	: OFF
	AIN/DIN	: AIN

Adjustment locations

RV301, 302, 501

RV401, 402, 601

ARP-1 Board

Adjustment procedure

1. Input CMRR adjustment

Input signals with the same phase and same amplitude to the HOT and COLD inputs (+24dBs, 10kHz).

Connect the audio level meter or oscilloscope to TP301 (CH1) and TP401 (CH2).

Specification: minimize the output.

RV301(CH1)

RV401(CH2)

2. Input level adjustment

Set the input to 1kHz and +4dBs.

Specification: Adjust so that the -20dB position on the digital level meter lights up and so that when the input is increased by +0.1dB, the LED segment (-18dB) just above -20dB lights up.

RV302(CH1)

RV402(CH2)

3. Output level adjustment

Set the input to 1kHz and +4dBs.

Read off the output from the level meter.

Specification : +4±0.1dBs.

RV501(CH1)

RV601(CH2)

4-1-2. 1kHz Test Signal Oscillation Level Adjustment

Equipment required

Frequency counter

Oscilloscope

Connections

Connect the oscilloscope to TP4 of the ARP-1 board and monitor the frequency with the frequency counter.

Switch and control settings

Monitor housing	REF MARKER	: -20dB
	SCALE SW	: 0.2dB
	LINE MONITOR MODE:	INPUT
MCK-1 board	TAPE SPEED	: HI
	Fs MODE	: 48k
DAD-1 board	EMP ON/OFF	: OFF
	AIN/DIN	: AIN
ARP-1 board	SW1 OSC ON/OFF	: ON

Adjustment procedure

1. Oscillation frequency adjustment

Specification: 1kHz±0.005Hz

RV7

2. Oscillation level adjustment

Adjust RV8 so that -20dB on the digital level meter lights up (both CH1 and CH2).

4-1-3. AUX Input/output Level Adjustment

Equipment required

Audio signal generator

Audio level meter

Connections

Switch and control settings

Monitor housing	REF MARKER : -20dB
	SCALE SW : 0.2dB
	LINE and AUX
	MONITOR MODE: INPUT
MCK-1 board	TAPE SPEED : HI
	Fs MODE : 48k
DAD-1 board	EMP ON/OFF : OFF
	AIN/DIN : AIN

Adjustment locations

- RV101, 103
- RV201, 203

Adjustment procedure

1. AUX output level adjustment

Input a 1kHz, +4dBs signal to the LINE input. Insert the jumper sockets of the AUX CH1 (CH2) block on the ARP-1 board into the J101, J103 and J201 jumper pins. In other words, make the line input AD/DA signals the AUX input. Read out the AUX OUT output level with the audio level meter.

Specification: +4dBs \pm 0.1dB

- RV103 (CH1)
- RV203 (CH2)

2. AUX input level adjustment

Input a 1kHz, +4dBs signal to the AUX input. Insert the jumper sockets of the AUX CH1 (CH2) block on the ARP-1 board into the J102, J103, and J202 jumper pins. In other words, use the AUX IN signals as input. Read out the AUX OUT output level with the audio level meter.

Specification: +4dBs \pm 0.1dB

- RV101 (CH1)
- RV201 (CH2)

The next section explains the AUX TRACK record and playback adjustment.

4-1-4. AUX TRACK (CH1, CH2, and TC) Playback Level Adjustment

Equipment required

Audio level meter
Oscilloscope

Tape

PCM-3402 alignment tape AR3402-1

Connections

Switch and control settings

Monitor housing	MSAFE SW : ON
	AUX MONITOR MODE: REPRO
MCK-1 board	TAPE SPEED : LO
	Fs MODE : 48k

Adjustment locations

- RV102 (AUX CH1)
- RV202 (AUX CH2)
- RV1 (TC)

Adjustment procedure

1. AUX CH1 and CH2 playback level adjustment

Playback the AUX TRACK REF. LEVEL section of the PCM-3402 alignment tape and read out the AUX output level.

Specification: +4dBs within +0.2/-0.5 dB

- RV102 (CH1)
- RV202 (CH2)

2. AUX TC playback level adjustment

Playback the AUX TRACK REF. LEVEL section of the PCM-3402 alignment tape and read out the level of the output wave at TP2 with the oscilloscope.

Specification: 1.8Vp-p \pm 0.3V

- RV1

4-1-5. Bias Oscillation Circuit Adjustment

Equipment required

Frequency counter
Oscilloscope

Tape

Work tape

Switch and control settings

Monitor housing (MSAFE SW : OFF
ASSEMBLE REC: ON
MCK-1 board (TAPE SPEED : LO
Fs MODE : 48kHz

Adjustment locations

RV2, LV101, LV201

Adjustment procedure

While recording, perform the following adjustment.

1. Bias frequency adjustment

Connect the TP104 or TP204 to the frequency counter and read off the frequency.

Specification: 96kHz±500Hz

RV2

2. Bias amp output level adjustment

Connect the oscilloscope to TP104 (CH1) or TP204 (CH2) and monitor the waveform.
Specification: 95%±5% of peak output

LV101 (CH1)

LV201 (CH2)

4-1-6. AUX CH1 and CH2 recording level adjustment

Equipment required

Audio signal generator
Audio level meter
Oscilloscope

Tapes

C1C-DAQ (or a C2D-DAQ recognized as the equivalent of a C1D)

Connections

Switch and control settings

Monitor housing (MSAFE SW : OFF
ASSEMBLE REC : ON
LINE MONITOR MODE: INPUT
MCK-1 board Fs MODE : 48k
J21, J23 jumpers ON (REC ON CONTROL)

Adjustment locations

RV3, 4, 5, 6

RV104, 204

Adjustment procedure

Input a 1kHz, +4dBs signal to the line input with the signal generator. Set the tape speed to LO (on the MCK-1 board). Set the RV104, RV204, RV3, RV4, RV5 and RV6 to their mechanical centers. Adjust while recording and playing back a C1D-1/4A tape.

1. Rough adjustment of the recording level (Bias level adjustment)

Record while turning RV4 (CH1) and RV6 (CH2) and monitor TP104 and TP204 with the oscilloscope. Adjust so that the AUX output level in the playback mode is about +4dBs. However, the bias level must be greater.

2. DC erase offset cancellation adjustment (Distortion adjustment)

Record and playback over and over, and measure the distortion ratio of the AUX output by monitoring the DC level of TP104 and TP204 in STOP mode with oscilloscope.

Specification: 3% or less

RV104 (CH1)

RV204 (CH2)

3. Recording level fine adjustment

Here, monitor the AUX output the same way as in step 1, and adjust the controls listed below at low and high tape speeds.

Specification: $\pm 4\text{dB}$

RV4 (LO: CH1) }
RV6 (LO: CH2) } Low Speed
RV3 (HI: CH1) }
RV5 (HI: CH2) } High Speed

4-1-7. AUX CH1 and CH2 Recording and Playback Characteristics Check

Equipment required

Audio signal generator

Audio level meter

Oscilloscope

Tape

C1C-DAQ (or a C2D-DAQ recognized as the equivalent of a C1C)

Connections

Switch and control settings

Monitor housing (MSAFE SW : OFF
ASSEMBLE REC : ON
LINE MONITOR MODE: INPUT

MCK-1 board Fs MODE : 48k

J21, J23 jumpers ON (REC ON CONTROL)

Adjustment procedure

1. AUX CH1 and CH2 recording and playback frequency characteristics

Output levels of 100Hz and 10kHz, using a 1kHz, +4dBs signal as a reference at low and high tape speeds

Specification: within $\pm 4\text{dB}$

2. AUX CH1 and CH2 recording and playback distortion ratio

At low and high tape speeds

Specifications: 4% or less and within $\pm 1\text{dB}$

3. S/N ratio

Using a 1kHz, +4dBs signal as a reference at low and high tape speeds

Specification: 35dB or less

4-1-8. AUX TRACK TC Recording Adjustment

Since the TC recording current level is fixed, this section explains how to perform the DC erase offset cancellation adjustment.

Equipment required

Oscilloscope

Tape

C1C-DAQ, C2D-DAQ, or other ordinary tape

Switch and control settings

Monitor housing (MSAFE SW : OFF
ASSEMBLE REC: ON
MCK-1 board (TAPE SPEED : LO
Fs MODE : 44.056k

Adjustment locations

RV9

Adjustment procedure

Connect the oscilloscope to TP1 (TC recording waveform) and TP2 (TC playback waveform).

1) Turn RV9 so that the DC level at TP1 is 0V in STOP mode.

2) Perform self-recording and playback, and turning RV9, add the inverted DC level in REC mode to cancel the deviation from the zero-cross point of the time code waveform.

Specification: within $\pm 0.3V$ of the zero-cross point

4-2. DAD-1 BOARD ADJUSTMENT AND CHECK

Before adjusting the DAD-1 board, always make sure that the ARP-1 board is properly adjusted.

4-2-1. A/D Converter Offset Adjustment

Switch on the power and leave it on for 5 minutes to allow the system to warm up.

Equipment required

Audio signal generator

Audio level meter

Oscilloscope

Connections

Switch and control settings

Monitor housing	SCALE SW	: NORMAL
	LINE MONITOR MODE	: INPUT
MCK-1 board	TAPE SPEED	: HI
DAD-1 board	EMP ON/OFF	: OFF
	AIN/DIN	: AIN

Adjustment locations

RV101

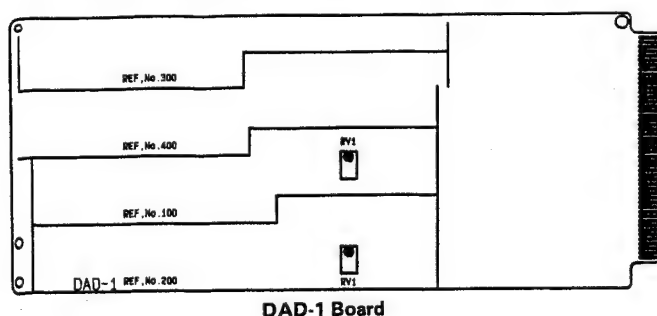

RV201

Adjustment procedure

Preparations

1 MCK-1 board Fs: 48kHz

2 DAD-1 board Set the A/D and D/A digital offset rotary switches to A.

1) Rough adjustment

Apply a 1kHz, -76dB (-52dBs) signal to the line input.

Specification:

-57.8dB > -60dB display range > -70.3dB

Adjust so that the -60dB position on the digital level meter turns off and also check that the line output level is -76dB (-52dBs) ± 2 dB.

RV101 (CH1)

RV201 (CH2)

Set the Digital I/O format selector of DIO board to SDIF and monitor the SDIF-2 (CH1 and CH2) OUT and WORD SYNC OUT with the oscilloscope.

Specification: Adjust so that the amplitude of the data is 2 bits or less as shown in the waveform below.

RV101 (CH1)

RV201 (CH2)

2) Fine adjustment

Switch off the LINE input signal.

Switching the modes of the Fs selector and SPEED selector on the MCK board, adjust RV101 and RV201 to obtain the following specification.

Specification: The noise level must be no greater than -89dB (-65dBs) and the waveform must be like white noise.

RV101 (CH1)

RV201 (CH2)

4-2-2. DAD-1 Board Characteristics Check

1. Noise level check

EMP ON

With input off in all the Fs and SPEED modes,

Specification:

+24(dBs) - noise level(dBs) > 90dB

2. Distortion ratio check

EMP OFF

(100Hz, 1kHz, 10kHz) +4dBs,

(100Hz, 1kHz, 10kHz) +24dBs

EMP ON

(100Hz, 1kHz, 10kHz) +4dBs

Specification: 0.5% or less

3. Frequency characteristic check

EMP On and Off

Using a 1kHz and +4dBs signal as reference, check 20Hz, 100Hz, 10kHz, 15kHz and 20kHz output levels.

Specification: Level = within +0.5dB
-1.0

4-3. REC-1 BOARD ADJUSTMENT

This section explains how to adjust the recording current for recording digital audio data in 12 tracks with the 2 recording heads.

4-3-1. Digital Recording Current Offset Adjustment

Equipment required

REC current adjustment filter

(J-6222-020-A)

Digital voltmeter

Tape

Work tape

Connections

Switch and control settings

Monitor housing ASSEMBLE REC : ON

MCK-1 board (TAPE SPEED : HIGH
Fs MODE : 48k

REC-1 board (TEST/NORM : TEST
SW1 : See the figure below.

SW1

(When SW1 is set as shown in the figure above, a 192kHz square wave is generated.)

Adjustment procedure

1. Connect REC Current Adj. jig (J-6222-020-A) and Digital Voltmeter to REC-1 board TP-2 using extension board.
2. Adjustment procedure
Set SW1 as shown in the figure to generate a 192kHz square wave, then adjust RV1 for each track while recording the square wave. Adjust RV1 so that the reading on the digital voltmeter meets the following specification.

Specification: $0 \pm 5\text{mV DC}$

Adjustment location

→ RV1 for each track

Adjustment location

○RV1 for each track

4-3-2. Digital Recording Current Level Adjustment

Equipment required

AC voltmeter

- (HP-334 DISTORTION METER
- MN-44513 NOISE METER (MEGURO)
- HP-3400 AC Voltmeter

Digital monitor head jig (J-6105-730-A)

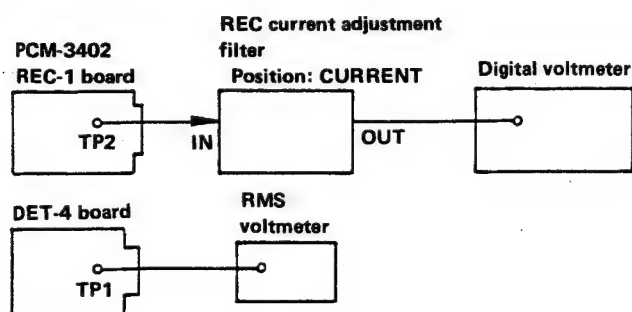

REC current adjustment jig (J-6222-020-A)

Digital voltmeter

Tape

CLC-DAQ (with data)

Connections

Besides the connections shown in the drawing above, connect the harness that is connected to CN304 on the PA-57 board, to the monitor PB head.

Switch and control settings

Monitor housing	ASSEMBLE REC	: ON
MCK-1 board	TAPE SPEED	: HIGH
	Fs MODE	: 48k
REC-1 board	TEST/NORM	: TEST
	SW1	: See the figure below.

SW1

MON REC HEAD

Adjustment procedure

1. Connect AC voltage meter to TP-1 on DET-4 board.
2. Connect REC Current Adj. jig (J-6222-020-A) and Digital Voltmeter to REC-1 board TP-2 using extension board and switch to current mode.

Switch settings

Monitor housing: Monitor Rec
REC MODE : MONITOR
ASSEMBLE REC : ON

3. Measure "Vb" while in record.

Turn RV2 on REC-1 board and read off the peak playback level. Next, turn RV2 back counter-clockwise so that playback level becomes -0.3dB comparing the peak level.

Then measure Head Drive Voltage ("Vb") by digital voltmeter.

4. Measure "Va" while in record.

Turn RV2 slowly clockwise and confirm the peak playback level.

Turn clockwise again so that playback level becomes -0.3dB comparing the peak level. Then measure Head Drive Voltage ("Va") by digital voltmeter.

Note: Perform 4 and 5 three times.

5. Calculate V'nr of monitor rec head by using equation:

$$V'nr = \frac{Va + Vb}{2}$$

6. Calculate V mean of monitor rec head by using equation:

$$V \text{ mean} = \frac{V'nr1 + V'nr2 + V'nr3}{3}$$

7. Calculate V'nr of monitor rec head by using equation:

$$Vnr = 0.95 \times V \text{ mean} / kt$$

Va: -0.3dB below peak of playback level at upper side of peak current.

Vb: -0.3dB below peak of playback level at lower side of peak current.

Vnr: Adjustment MONITOR REC HEAD drive voltage.

kt: Coefficient of current calibration of "ClC-DAQ" reference tape.

8. Measure CTL Track Va, Vb using 4, 5 and 6.

Note: Perform this procedure one time.

9. Calculate Vctl using equation:

$$Vctl = 1.1 \times (0.95 \times V'nr) / kt$$

Vctl: Head drive voltage for CTL record current

Adjustment location

RV2 for each track

The coefficient kt tape is indicated on each ClC-DAQ. Be sure to use this kt when calculating Vnr.

SYNC-REC HEAD

Adjustment procedure

1. Install the monitor head jig.

Install the monitor head jig by PSW4x6 screw (See the figure below.) and connect CN306 connector from PA-57 to monitor head jig.

2. Uniformity adjustment

Probe TP1 on the track 2C of DET-4 board and playback pre-recorded alignment tape (AR3402-1) at digital playback height section. Turn the uniformity adj. screw to get maximum level (See the figure below.).

3. Height

Probe TP1 on the track 2C of DET-4 board. Playback pre-recorded alignment tape (AR3402-1) at digital playback height section and turn height adj. screw for peak level.

4. Azimuth adjustment

- . Probe TP1 on the tracks 2D and 1A.
- . Playback pre-recorded alignment tape (AR3402-1) at digital playback Azimuth section.
- . Loosen the Azimuth lock screw less than 1 rotation.
- . Adjust the Azimuth adj. screw so the phase of track 1A & 2D are in phase.
- . Turn the Azimuth adj. screw clockwise so the phase distance between (1A-2D) becomes 20µsec.
- . Fasten the Azimuth lock screw. The phase of 1A and 2D should be 0µsec. spec. 0±10µsec.

5. Height precise adjustment

Same as 3.

6. Confirmation of uniformity

- . Probe TP1 on the track 2C of DET-4 board.
- . Playback alignment tape (AR3402-1) at digital playback height section pre-recorded.
- . Gently touch the bottom and top of the tape before and after the monitor head jig. Confirm TP1 signal has not increased in amplitude.

7. Connect AC voltage meter to TP1 on DET-4 board.

8. Connect REC Current Adj. jig (J-6222-020-A) and Digital Voltmeter to REC-1 board TP2 using extension board and switch to current mode.

Switch settings

Monitor housing: SYNC REC

REC MODE : SYNC

ASSEMBLE REC : ON

9. Measure "Vb" while in record.

Turn RV3 on REC-1 board and read off the peak playback level. Next turn RV3 back counter-clockwise so that playback level becomes -0.3dB comparing the peak level. Then measure Head Drive Voltage ("Vb") by digital voltmeter.

10. Measure "Va" while in record.

Turn RV3 slowly clockwise and confirm the peak playback level. Turn clockwise again so that playback level becomes -0.3dB comparing the peak level. Then measure Head Drive Voltage ("Va") by digital voltmeter.

Note: Perform 4 and 5 three times for accurate measurement.

11. Calculate V'nr of sync rec head by using equation:

$$V'nr = \frac{Va + Vb}{2}$$

12. Calculate V mean of sync rec head by using equation:

$$V \text{ mean} = \frac{V'nr1 + V'nr2 + V'nr3}{3}$$

13. Calculate V'_{nr} of sync rec head by using equation:

$$V_{nr} = 0.95 \times V_{\text{mean}}/kt$$

Va: -0.3dB below peak of playback level at upper side of peak current.

Vb: -0.3dB below peak of playback level at lower side of peak current.

Vnr: Adjustment MONITOR REC HEAD drive voltage

kt: Coefficient of current calibration of "ClC-DAQ" new reference tape.

14. Measure CTL track Va, Vb using steps 4, 5 and 6.

Note: Perform this procedure one time.

15. Calculate Vctl of sync rec head using equation:

$$V_{ctl} = 1.1 \times (0.95 \times V'_{nr})/kt$$

Vctl: Head drive voltage for CTL record current

16. While recording in sync rec mode, adjust RV3 for Vnr found above at REC-1 board TP2.
17. Perform 7 to 17 for all track, including CTL track.

Adjustment location

RV3 for each track

Each ClC-DAQ tape has its own coefficient kt. Be sure to use this kt when calculating Vnr.

4-3-3. Recording Current Adjustment Check

In order to check that there are no problems in the recording head contact or with the head itself, play back the sections of tape recorded in monitor recording and sync recording and check the levels.

Specification: The difference between the playback levels for both D/M REC and D/S REC heads must be no greater than 0.5dB.

DET-4 Board

REC-1 Board

4-4. PA-57 AND DET-4 BOARDS ADJUSTMENT

This section explains how to adjust the digital playback system for the digital audio data.

Equipment required

CRC error meter (J-6220-210-A)

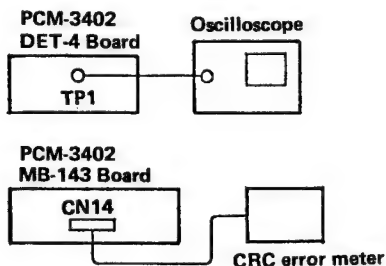

Oscilloscope

Tapes

C1C-DAQ or C2D-1/4A

PCM-3402 alignment tape AR3402-1

Connections

Switch and control settings

REC-1 board (TEST/NORM : NORM)

ARP-1 board (1kHz OSC SW: ON)

4-4-1. Digital Playback System Rough Adjustment

Play back the data track playback adjustment section of the alignment tape. Adjust the adjustment locations listed below so that the waveforms on the oscilloscope look like those shown in the figures below.

1. HIGH SPEED

(Switch settings MCK-1: SPEED/HIGH)
Fs : 48kHz

- (1) Play back the "CTL and data track pre-adjustment" section of the Pre-recorded alignment tape (AR3402-1).
- (2) . Connect DVM to TP2
Adjust RV2 for about 8VDC
- (3) Probe TP1 on the track 1A of DET-4 board.
 - . Adjust RV1 on the track 1A of PA-57 board so that the jitter at the cross-point is minimum.
 - . Adjust RV3 on the track 1A of DET-4 board so that the jitter at the cross-point is minimum.
 - . Adjust RV4 on the track 1A of DET-4 board so that the offset at the cross-point is minimum (See the figure below.).
 - . Repeat above for all digital tracks.

(4) Adjustment location

PA-57 ○RV2 and Track 1A RV1, 201, 301, 401, 501, 601, 701, 801, 901, 1001, 1101, 1201

DET-4 ○Track 1A RV3, 203, 303, 403, 503, 603, 703, 803
○RV104, 204, 304, 404, 504, 604, 704

HIGH SPEED
Fs: 48 kHz

2. LOW SPEED

(Switch settings MCK-1: SPEED/LOW)
Fs : 48kHz

- (1) Play back the "CTL and data track pre-adjustment" section of the pre-recorded alignment tape (AR3402-1).
- (2) Connect DVM to TP2 on PA-57 board. Adjust RV3 for about 1.4VDC.
- (3) Probe TP1 on DET-4 board.
 - . Adjust RV1 on the track 1A of the DET-4 board so that the jitter at the cross-point is minimum.
 - . Adjust RV2 on the track 1A of DET-4 board so that the offset at the cross-point is minimum (See the figure below.).
 - . Perform above procedure for all digital tracks.

(4) Adjustment location

PA-57 ○RV3

DET-4 ○Track 1A RV1, 201, 301, 401,
501, 601, 701, 801
○Track 1A RV2, 202, 302, 402,
502, 602, 702, 802

4-4-2. CTL Track Playback Adjustment

Set the SPEED setting on the MCK-1 board to HI (Fs of 48kHz). While recording and playing back, there should be no distortion at the top and bottom of the waveform. See the figure below.

Adjust RV21 on PA-57 board for max. amp. without ringing.

PA-57 Board ○RV1

Adjust RV5 on DET-4 board for min. ringing. Top and bottom of the waveform should be flat shown in photograph.

DET-4 Board ○RV5

Set the oscilloscope to the AC coupling, and line up the click points and the cross points.

DET-4 Board ○RV6

4-4-3. Digital Data Track Playback-system Fine Adjustment

Load a C1C-DAQ tape or a C2D-1/4A tape.

(1) Switch and control settings

MCK-1 Board Fs mode: 48kHz

Test switch : S8 DIP switch

Note: After the adjustment, always restore the test switch to its original position. (This allows $\pm 30\%$ Vari-speed.)

(2) TAPE SPEED: HIGH

Perform monitor recording on C1C-DAQ or C2D-1/4A. Perform a sync insert recording to make a self-recorded tape. Make sure the playback overwrite tape recording is longer than the error measurement time. Play back at VARI about $+18\%$. During playback, adjust the location listed below in such a way as to minimize the CRC error on each track read out by the CRC error meter.

1. PA-57 RV2: Adjust \odot RV2 a little to minimize the CRC error.

CRC error meter SW setting:

AUTO/MANUAL : AUTO

COUNT PERIOD: MIN.

2. PA-57 RV1: Adjust \odot RV1 to minimize the CRC error and to minimize the cross-point jitter. CRC error meter SW setting is same as #1.

3. DET-4 RV3: Adjust \odot RV3 to minimize the CRC error and cross-point jitter.

CRC error meter SW setting:

AUTO/MANUAL : AUTO

COUNT PERIOD: SECOND POSITION FROM MIN.

4. DET-4 RV4: Adjust RV4 to minimize the CRC error and cross-point offset.

CRC error meter SW setting:

AUTO/MANUAL : AUTO

COUNT PERIOD: MAX.

5. Repeat steps 2 through 4 to get minimum CRC error.

TARGET: Under level A

(If you cannot reach to level A, that is O.K.)

6. Adjustment location

- ① PA-57 \odot RV2 (High Freq. E. Q.)
- ② PA-57 \odot RV1 (each track)
(Gain & High Freq. E. Q.)
- ③ DET-4 \odot RV3 (each track)
(Phase E. Q.)
- ④ DET-4 \odot RV4 (each track)
(Detect Level)

(3) TAPE SPEED: LOW

Perform monitor recording on C1C-DAQ. Perform a sync insert record to make a self-recorded tape. Make sure the playback overwrite tape is recorded longer than the error measurement time. Play back at VARI about -25% on FS = 44.056kHz. During playback, adjust the location listed below in such a way as to minimize the error rate on each track read out by error meter.

1. PA-57 RV3: Adjust \odot RV3 a little to minimize the CRC error and the cross point jitter.

CRC error meter SW setting:

AUTO/MANUAL : AUTO

COUNT PERIOD: MIN.

2. DET-4 RV1: Adjust \odot RV1 to minimize the CRC error and cross point jitter.

CRC error meter SW setting:

AUTO/MANUAL : AUTO

COUNT PERIOD: SECOND POSITION FROM MIN.

3. DET-4 RV2: Adjust \odot RV2 to minimize the CRC error and cross-point offset.

CRC error meter setting:

AUTO/MANUAL : AUTO

COUNT PERIOD: MAX.

4. Repeat 2 to 3 to get minimum CRC error.

TARGET: Under level A

(If you cannot reach to level A, that is O.K.)

5. Adjustment location

- ① PA-57 \odot RV3 (High Freq. E. Q.)
- ② DET-4 \odot RV1 (Phase E. Q.)
- ③ DET-4 \odot RV2 (Detect Level)

(4) Final error rate checking

1. SW setting Fs: 48kHz

TAPE SPEED: HI & LOW on
MCK board

TEST NORMAL: NORMAL on
REC board

2. HIGH SPEED

Perform initial monitor recording, overwrite in sync insert to make a self-recorded playback tape. The overwrite tape should be recorded longer than the error measurement time. Play back at normal speed and $\pm 12.5\%$ Vari speed.

CRC error meter SW setting:

AUTO/MANUAL : MANUAL

COUNT PERIOD: MAX.

(A) Push [START] button of CRC error meter.

(B) When light at the center of [START] button is off, take error count reading.

3. LOW SPEED

Same procedure as high speed except tape speed setting.

Perform the above step (3) on low speed.

4. Check that the LED level of CRC error meter is level B or less.

4-5. TPC-1 BOARD ADJUSTMENT

This section explains how to adjust the digital input/output level, balance control, and shuttle offset.

4-5-1. Digital Input/Output Level and Balance Control Adjustment

Equipment required

Test pattern generator jig

Connections

Insert the test pattern generator jig in place of the DAD-1 board.

Switch and control settings

Monitor housing	DIGITAL LEVEL	
	BALANCE CONTROL	
	SW	: INPUT
	REF MARKER	: -20dB
	SCALE SW	: 0.2dB
	MONITOR SIGNAL SELECT	
		: INPUT

Test pattern generator jig	LEVEL	: -20dB
	CH1, 2 EN	: ON
	FREQUENCY	: 1kHz

Adjustment locations

RV3 and 5

Adjustment procedure

Set the Digital audio LEVEL control and Digital audio BALANCE control on the monitor housing to their center positions.

Set the DIGITAL CONTROL selector on the monitor housing to INPUT.

1. Adjust \odot RV5 so that the CH1 level and CH2 level shown on the digital level meter are the same.

2. Adjust \odot RV3 to give a level of -20dB on the digital level meter.

4-5-2. Shuttle Dial Offset Adjustment

Tape

Work tape

Specification:

Internal shuttle mode

When the unit is switched from stop to shuttle mode, the tape must not move.

Adjustment location

RV2

Specification:

External shuttle mode

Connect a 1kHz, rectangular wave TTL-level signal with a 50% duty cycle to Pin No.34 (Shuttle PWM Input) of the 50-pin Parallel-Remote connector. When the unit is switched from stop to shuttle mode, the tape must not move.

Adjustment location

RV1

4-5-3. TPC-1 Board AD Offset Adjustment

Equipment required

Oscilloscope or digital voltmeter

Pin 1 of IC C5 should be +5V.

Adjustment location

RV4

4-6. DR-54 BOARD ADJUSTMENT

4-6-1. Tension Adjustment

See Section 3-5-3 "Tension adjustment".

Adjustment location

RV1 and 2

4-6-2. Offset Adjustment

The offset adjustment for the three drive amps has been completed with the manufacturing adjustment tool.

Note: These RV3, 4 and 5 should not be turned in the field service.

DR-54 Board

4-7. IF-153 BOARD ADJUSTMENT

4-7-1. Time Code Output Level Adjustment

Thread a tape and play back it. Connect a 600 ohms resistor to the balance output and read off the voltage across that resistor with the oscilloscope.

Specification: $2.4V_p \pm 0.1V$

IF-153 Board

4-8. CTL-1 BOARD ADJUSTMENT

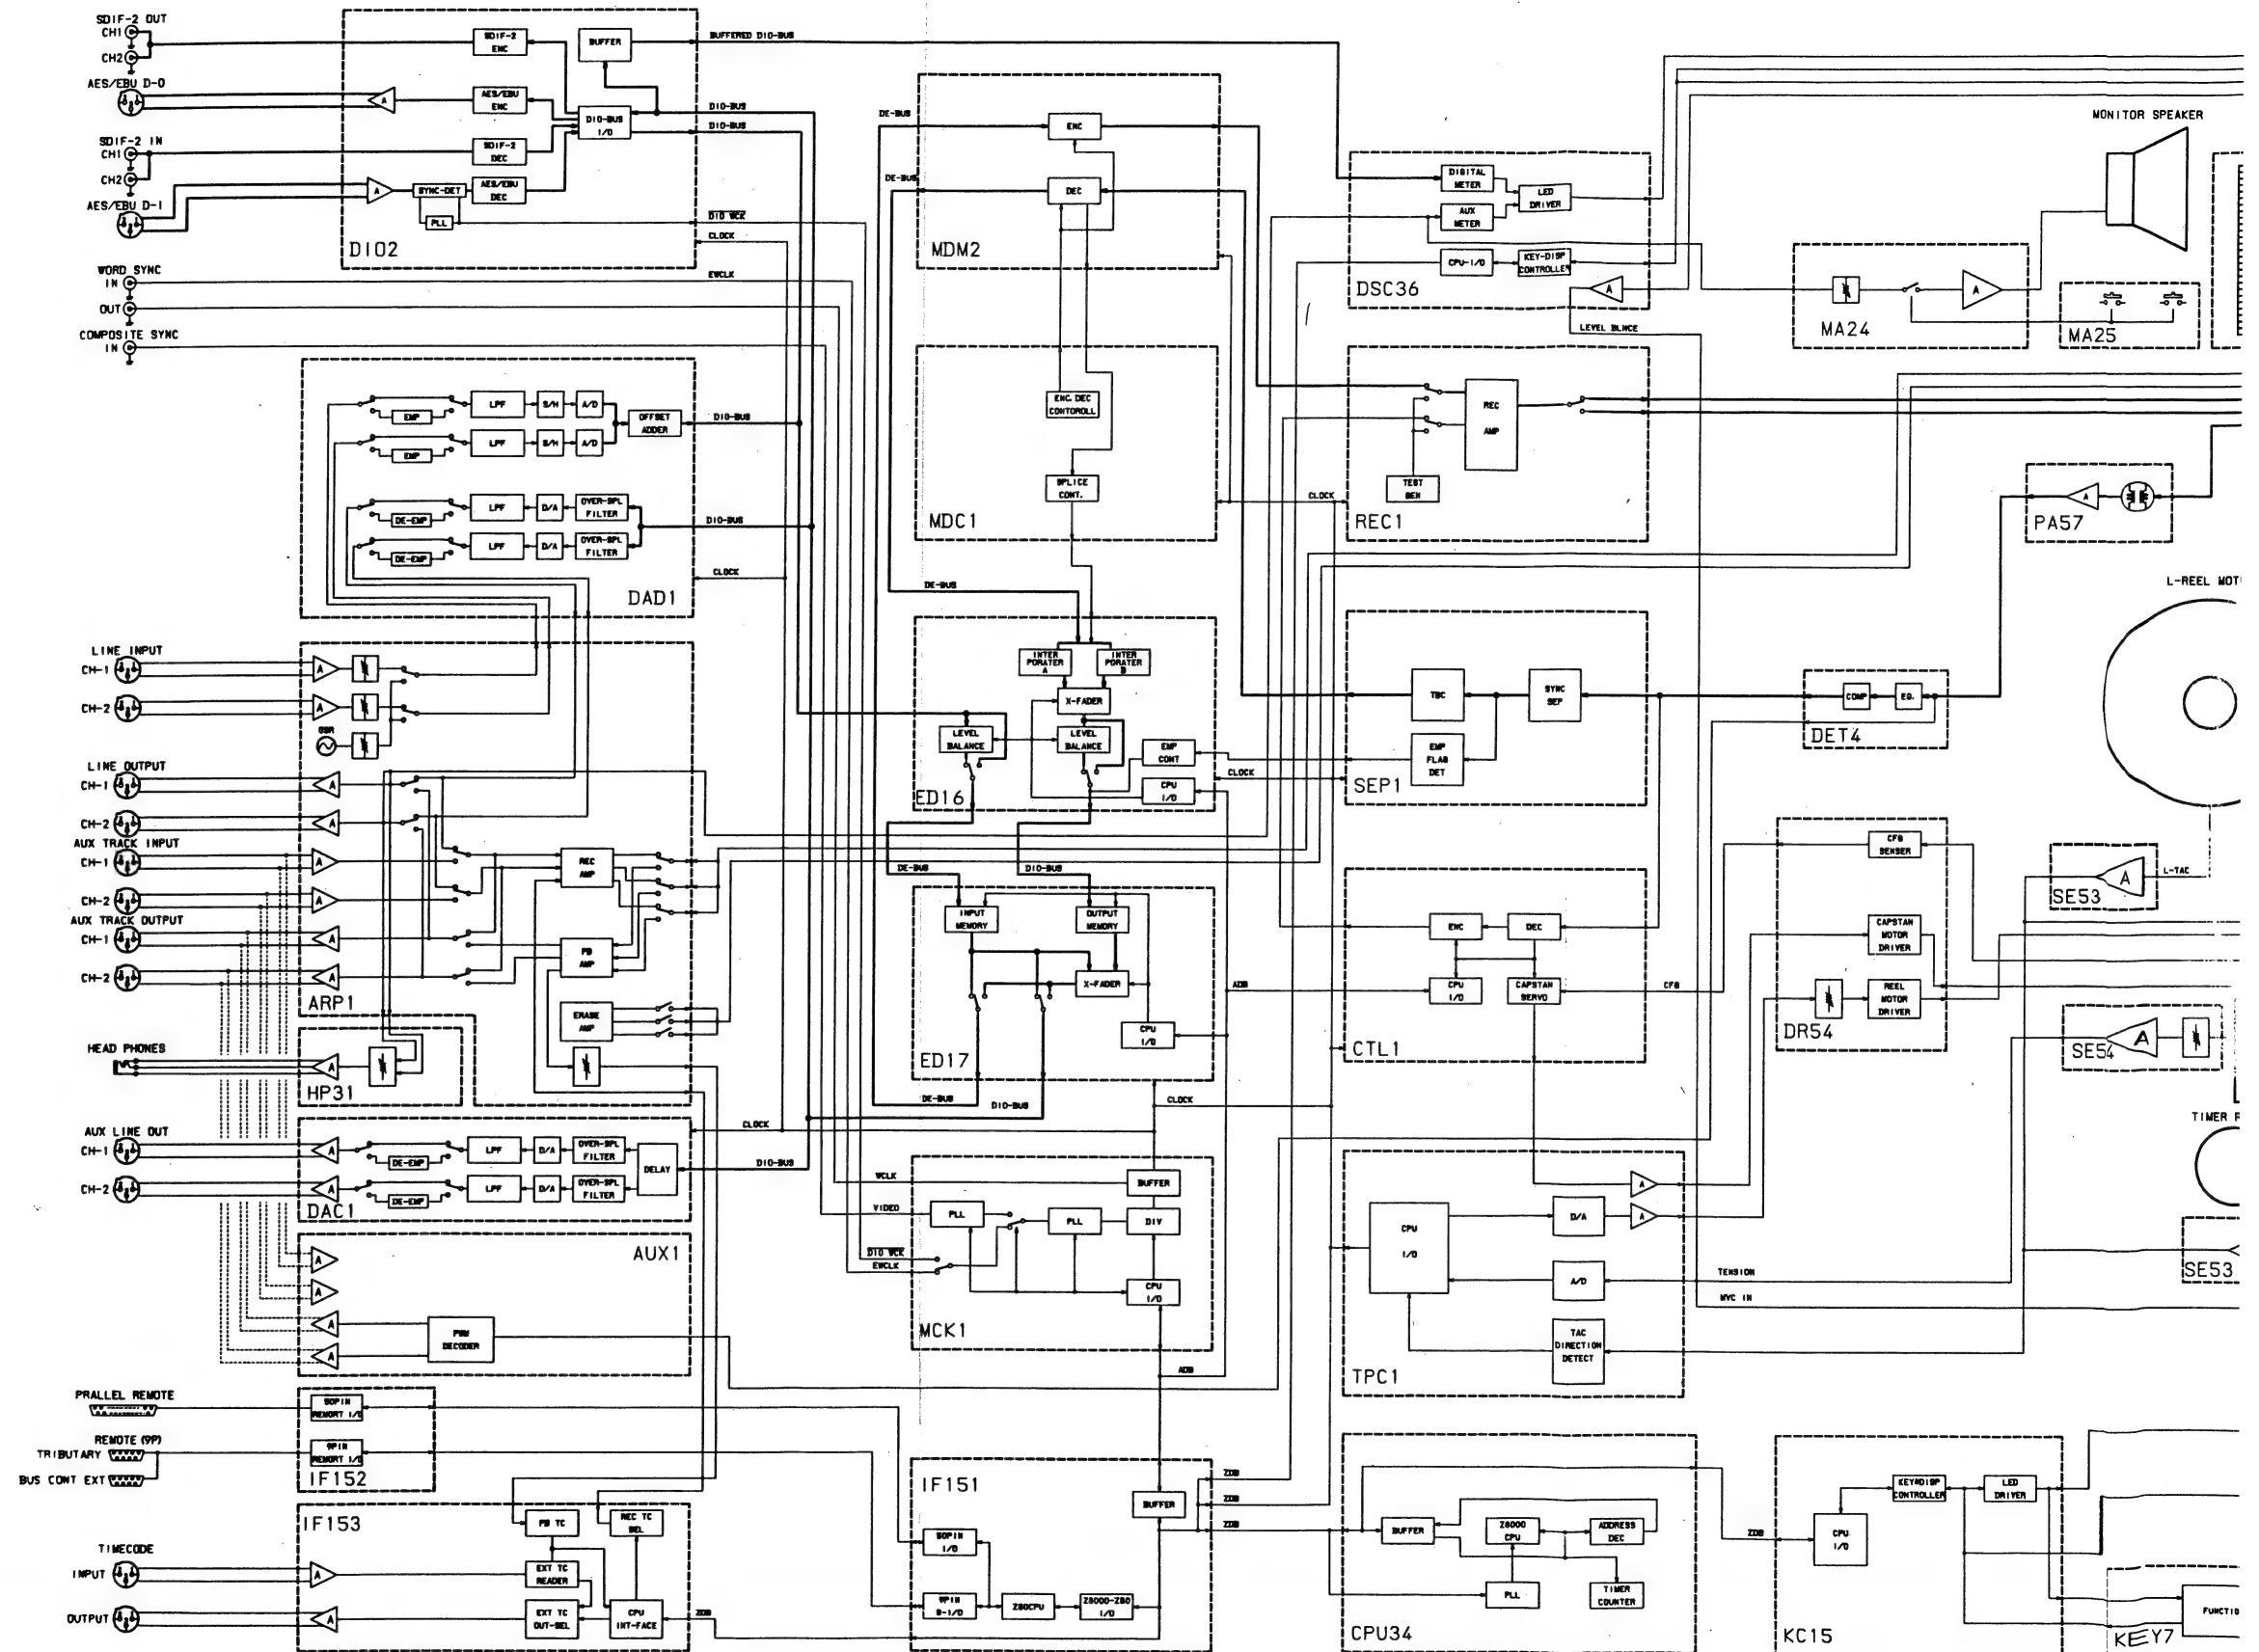

See Section 3-10-2 "CTL board Servo gain and phase adjustment and check".

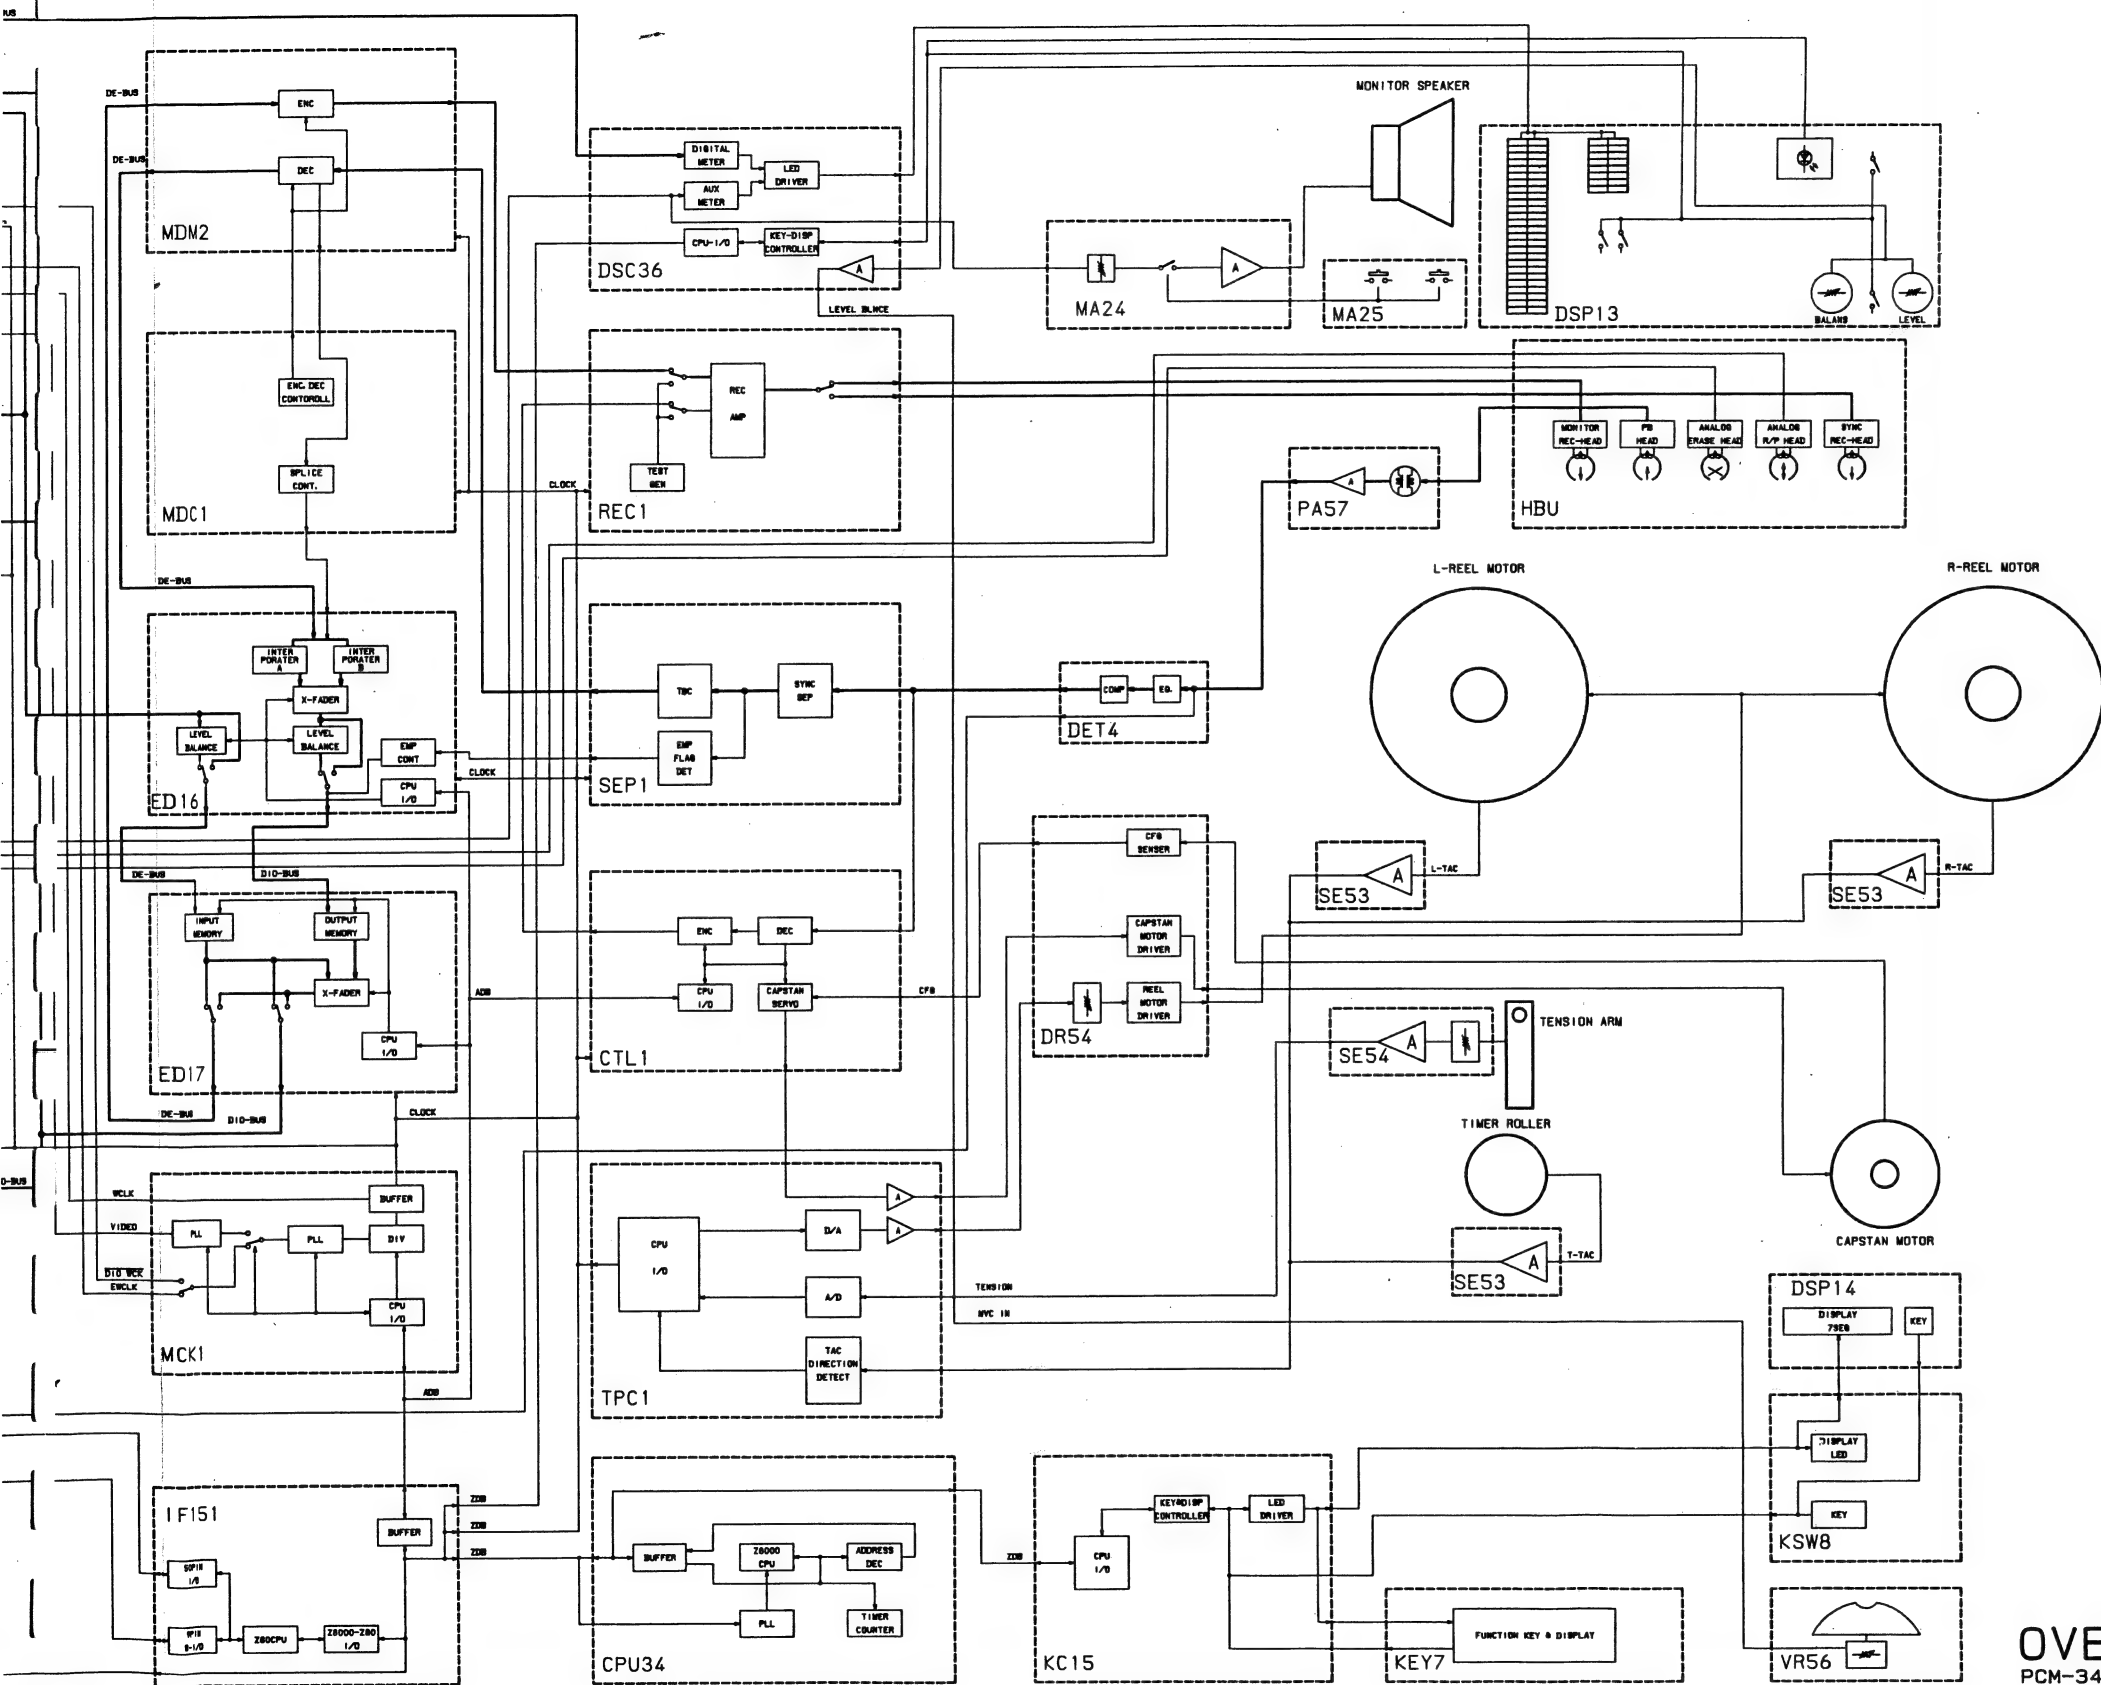

4-9. SE-54 BOARD ADJUSTMENT

See Section 3-5-2 "Tension arm adjustment".

The diagram is a complex schematic of a circuit board, organized into a grid. The columns are labeled with letters M, L, K, J, H, G, F, E, D, C, B, and A from left to right. The rows are labeled with numbers 1 through 10 from top to bottom. Each cell in the grid contains a rectangular component, likely an integrated circuit (IC), with various pins and labels. Some components are labeled with 'C' (capacitor) or 'R' (resistor) followed by a number. A 'DIP' label is located on the left side, pointing to a specific component. The bottom of the diagram features the text 'ED-17 1-620-309-13' and a 'LOT NO.' label.

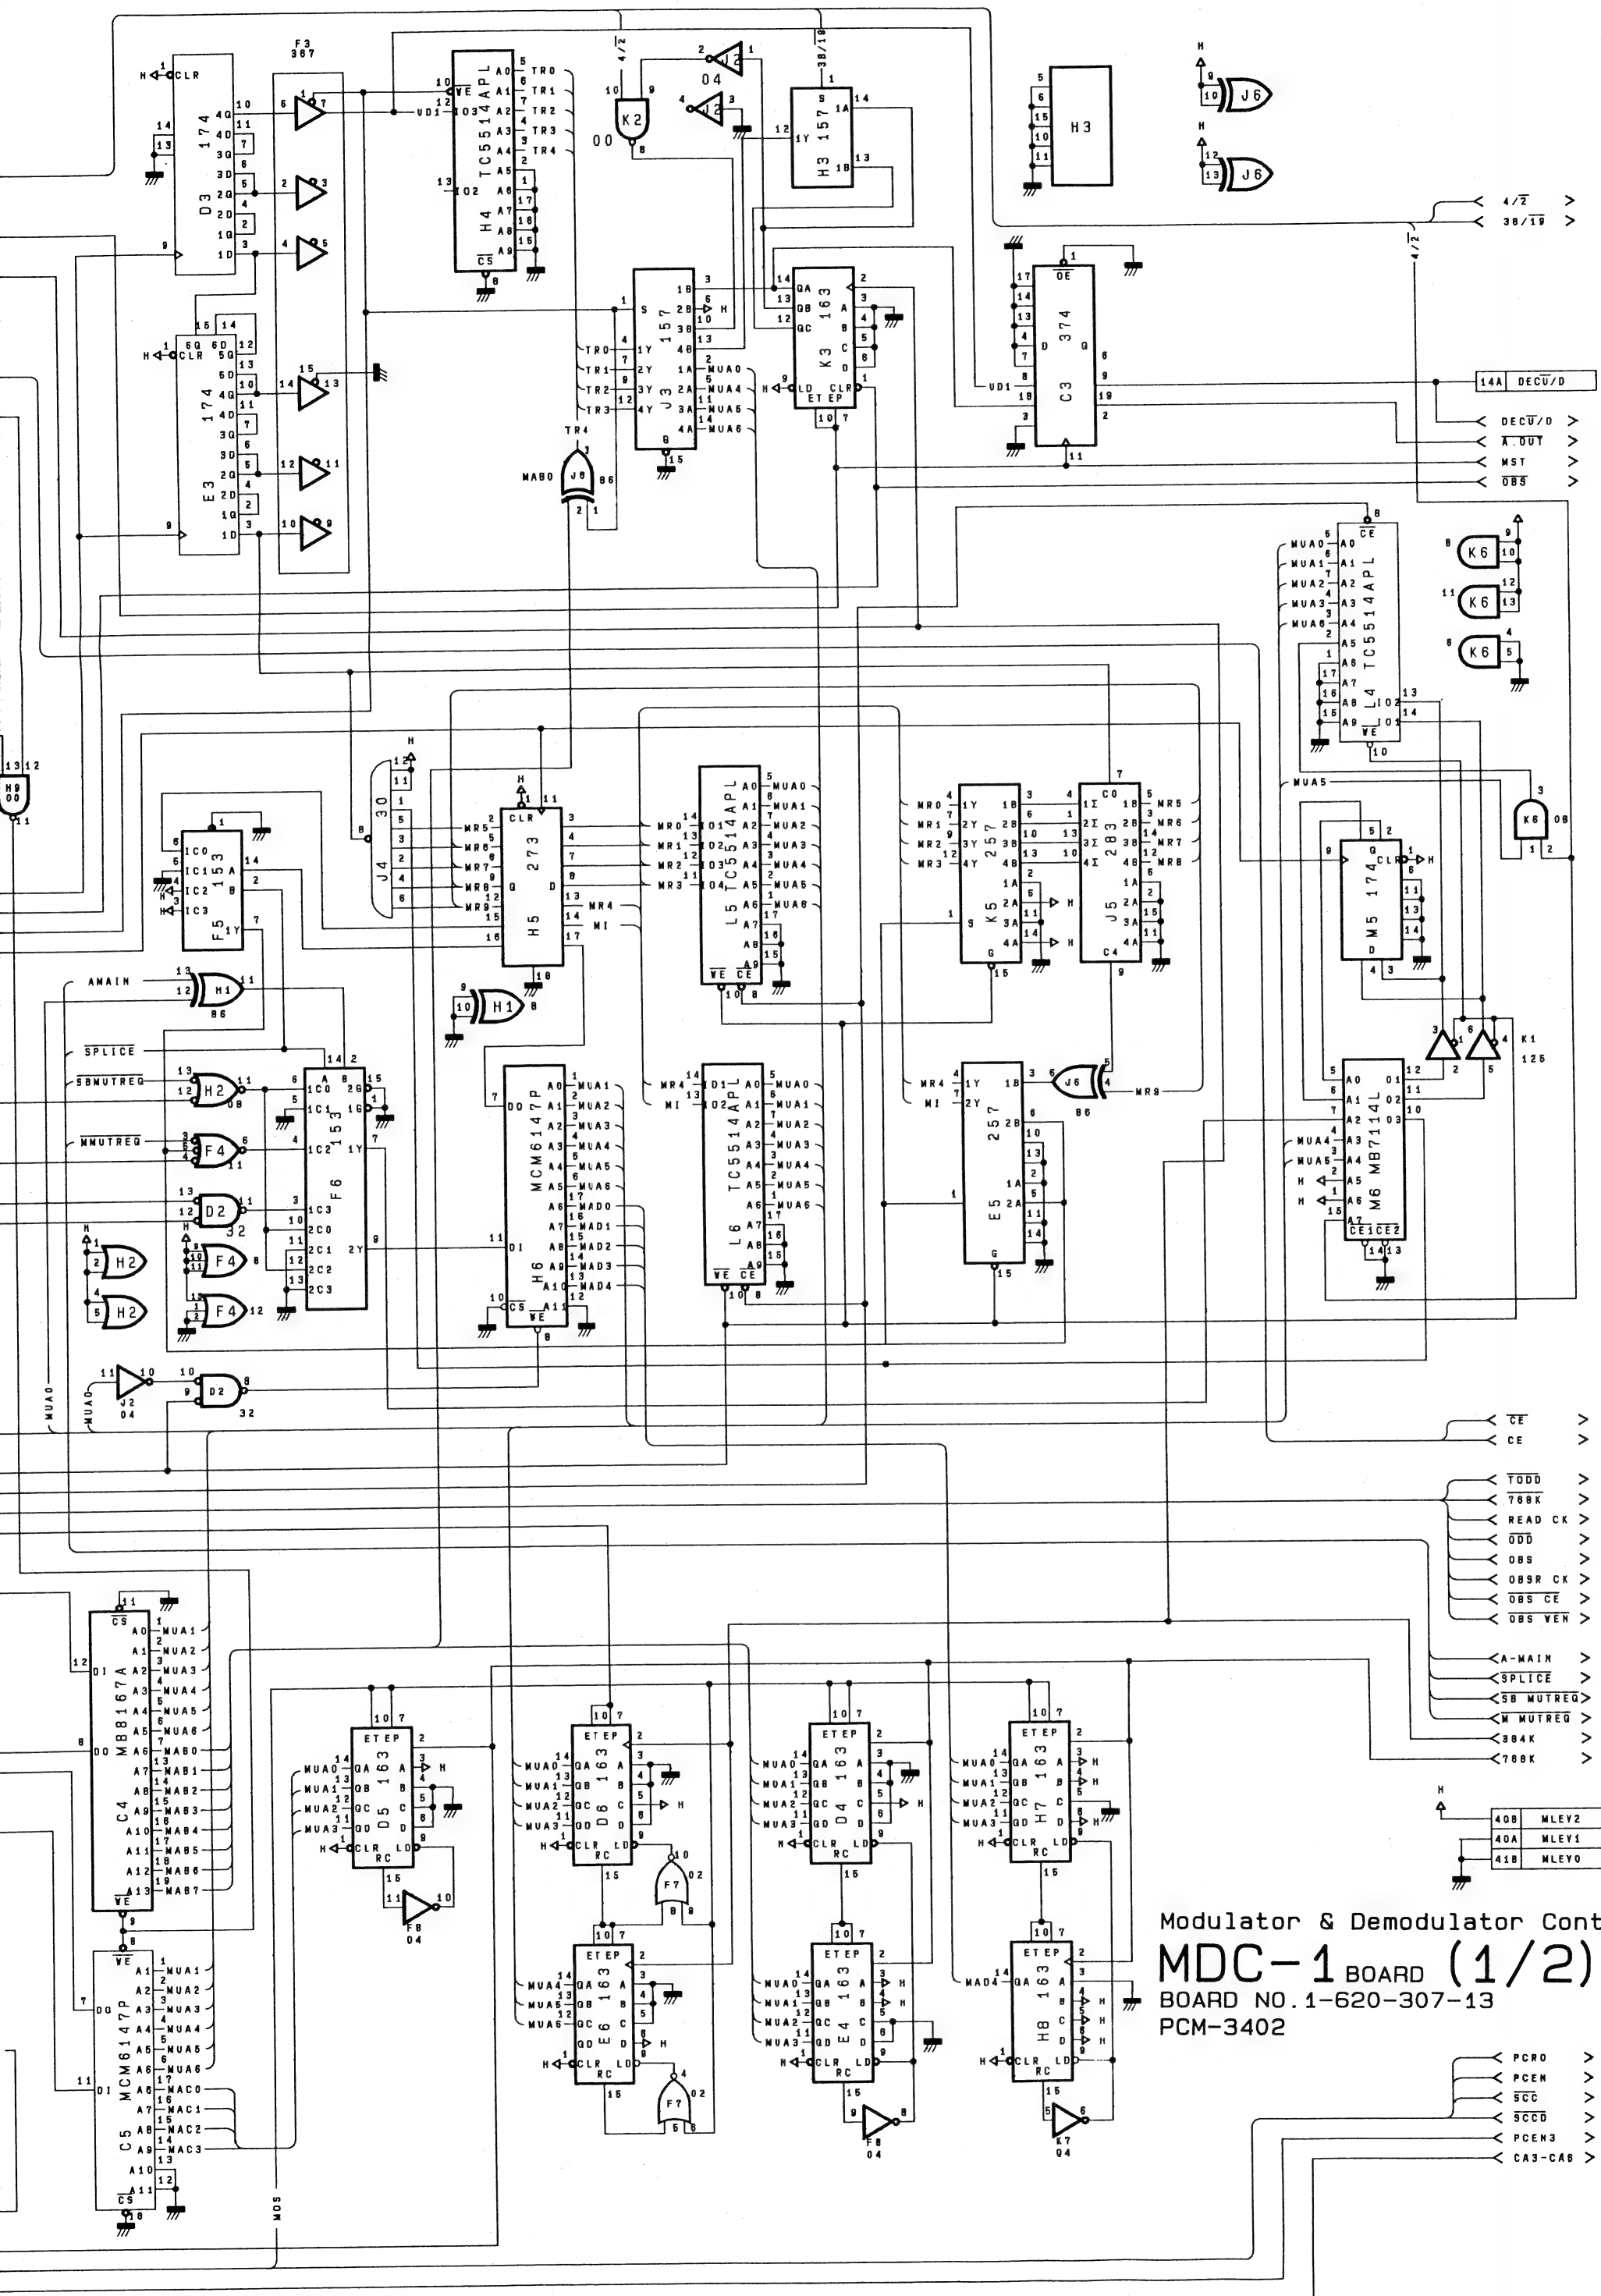

Figure 1 is a schematic diagram of the experimental setup. It shows a vertical stack of 50 horizontal bars, each representing a subject. The bars are numbered 1 to 50 on the left. On the right, there are labels for the bars: 'GND' for bars 1, 5, 10, 15, 20, 25, 30, 35, 40, 45, and 50; '+15V' for bar 2; '-15V' for bar 3; 'A GND' for bar 4; '+5V' for bars 46 and 47; and 'GND' for bars 48 and 49. The labels are grouped by a bracket on the right, with 'CN' and 'AU' at the top and 'A' at the bottom.

SECTION D
REPLACEABLE PARTS

D-1. PARTS ORDERING INFORMATION

Standardization of Parts
Repair parts supplied from Sony Parts Center may not be always identical with the part which actually in use due to "accommodating the improved parts and/or engineering changes" or "standardization of genuine parts". This manual's exploded views and electrical parts list are indicating the parts numbers of the "standardized genuine parts at present".

Parts marked with S in the column of SP
These parts are normally stocked as replaceable parts.

Parts marked with O in the column of SP
Orders for these parts will be processed, but allow for additional delivery time.

Parts without Part No.
These parts are not stocked because they are seldom required for routine service.

The components marked with Δ are critical to safe operation.
These components must be replaced with the same ones as described on the Parts List.

D-2. EXPLODED VIEWS AND PARTS LIST

ORNAMENTAL PANELS

Index			
No.	SP	Parts No.	Description

D-3. ELECTRICAL PARTS LIST

STANDARDIZED PARTS LIST

Replacements for capacitors and resistors not given in each board parts lists are shown below.

If a capacitor with the desired working voltage is not found, choose one of a higher working voltage.

CERAMIC CAPACITOR

Part No.	SP	Description

R23	s	1-215-416-00	RES, METAL 620 1% 1/6W
R24	s	1-215-433-00	RES, METAL 3.3K 1% 1/6W
R25	s	1-215-443-00	RES, METAL 8.2K 1% 1/6W
R39	s	1-215-492-00	RES, CARBON 910K 1% 1/6W
RB1	s	1-235-005-00	RESISTOR BLOCK 47K
RB2	s	1-235-005-00	RESISTOR BLOCK 47K
RB3	s	1-231-549-11	RESISTOR BLOCK 47Kx4
RB4	s	1-235-005-00	RESISTOR BLOCK 47K
RB5	s	1-235-005-00	RESISTOR BLOCK 47K
RB6	s	1-235-005-00	RESISTOR BLOCK 47K

DSP-13 BOARD

- o A-7850-492-A MOUNTED PCB, DSP-13
(This assembly includes the following parts.)

C1	s	1-124-471-00	CAP, ELECT 1000 20% 6.3V
C2	s	1-123-661-00	CAP, ELECT 100 20% 6.3V
C3	s	1-123-661-00	CAP, ELECT 100 20% 6.3V
C4	s	1-124-471-00	CAP, ELECT 1000 20% 6.3V
CN317	o	1-560-362-00	CONNECTOR POST HEADER, ILG (10P)
D14	s	8-719-821-14	DIODE TLR114A
D15 to 26	s	8-719-811-44	DIODE TLG114A
D27 to 30	s	8-719-812-41	DIODE TLR124
D31	s	8-719-812-41	DIODE TLR124
D32	s	8-719-811-44	DIODE TLG114A
D33	s	8-719-811-44	DIODE TLG114A
D34	s	8-719-945-71	DIODE BR5551K
D35	s	8-719-945-73	DIODE PY5551K-M-92
D36 to 41	s	8-719-945-72	DIODE BG5551K-92
D42	s	8-719-945-71	DIODE BR5551K
D43	s	8-719-945-73	DIODE PY5551K-M-92
D44 to 49	s	8-719-945-72	DIODE BG5551K-92
D50	s	8-719-945-71	DIODE BR5551K
D51 to 82	s	8-719-945-72	DIODE BG5551K-92
D83 to 88	s	8-719-945-73	DIODE PY5551K-M-92
D89	s	8-719-945-71	DIODE BR5551K
D90 to 121	s	8-719-945-72	DIODE BG5551K-92

NOTE : Please see pages D-21 for the part numbers of capacitors and resistors that are not listed in the parts list.

Ref. No.	SP	Parts No.	Description
D122 to 134	s	8-719-911-19	DIODE 1SS119
SW1 to 13	s	1-554-048-00	SWITCH, PUSH

DSP-14 BOARD

- o A-7850-502-A MOUNTED PCB, DSP-14
(This assembly includes the following parts.)

-	o	4-920-509-01	CAP (GRAY PLAIN), KEY
-	o	3-711-156-01	KEY CAP (R)
-	o	3-711-157-01	KEY CAP (ARROW)

D1 to 5	s	8-719-911-19	DIODE 1SS119
D6	s	8-719-812-43	DIODE TLG124A
D7	s	8-719-812-43	DIODE TLG124A
D8	s	8-719-939-91	DIODE HDSP-4850
D9	s	8-719-939-91	DIODE HDSP-4850
D10	s	8-719-939-91	DIODE HDSP-4850
DG1 to 18	s	8-719-907-82	DIODE GL-9E03D
SW1 to 5	s	1-554-761-11	SWITCH, KEY BOARD (WITH LED)

ED-16 BOARD

- o A-7850-466-A MOUNTED PCB, ED-16
(This assembly includes the following parts.)

-	s	2-251-622-11	LEVER, PC BOARD
ICA1 to 9	s	8-759-203-50	IC TC74HC574P
ICA10	s	8-759-203-60	IC TC74HC670P
ICA11	s	8-759-203-60	IC TC74HC670P
